### Want To Know More?

*Selected Forestry Statistics Canada 1995* is compiled by the Industry, Economics and Programs Branch of Natural Resources Canada - Canadian Forest Service. The material presented is drawn from statistics covering mainly the period 1970-1994.

**These publications are also available:** *Compendium of Canadian Forestry Statistics 1994* presents data on forest resources compiled by the National Forestry Database Program as well as key historical information gathered by earlier surveys. A snapshot overview is presented in a brochure entitled *National Forestry Database 1994 Summary*.

Copies of these publications may be obtained at no charge from the following address:

## ABSTRACT

**ATTENTION**

**ATTENTION**

**ATTENTION**

*Selected Forestry Statistics Canada 1995* presents a series of tables on commodity production, shipments and trade, principal and employment statistics by industry sector, as well as selling price indexes, financial statistics, and economic indicators. Some transportation, construction, and international data complete the picture.

Please note that data on Canadian forest resources and management activities are no longer in *Selected Forestry Statistics*. This information is now contained in the *Compendium of Canadian Forestry Statistics, National Forestry Database*.

This edition combines *Selected Forestry Statistics Canada 1993*, *Selected Forestry Statistics Canada 1994* and *Selected Forestry Statistics Canada 1995*. This document is now published once every two years rather than annually. The 1993 edition was photocopied and distributed on demand only.

Over 130 tables of forest economic data at the national and provincial levels are included in the report. Data have been extracted from approximately 55 different publications. In addition, the last section of this publication describes the main forestry and economic terms used in the tables. The conversion factors used to convert from metric to imperial measure and the standard symbols used are also provided. The reader should note that the columns of figures may not always add up due to rounding.

To increase the precision and facilitate the retrieval of time series data, CANSIM (a computerized data bank of Statistics Canada) was used wherever possible. The tables of commodity data were retrieved from CD ROM produced by Statistics Canada's International Trade Division and the world statistics were retrieved from AGROSTAT produced by the Food and Agriculture Organization of the United Nations.

Arrangements can be made to provide selected tables on diskette in WordPerfect 6.1 or ASCII format.

## RÉSUMÉ

**ATTENTION**

**ATTENTION**

**ATTENTION**

Le *Recueil de statistiques forestières canadiennes 1995* porte sur la production et les livraisons de marchandises, le marché des produits, les statistiques principales et les données sur l'emploi par secteur industriel ainsi que sur les indices des prix de vente, les statistiques financières et les indicateurs économiques. Quelques données sur le transport, la construction et la foresterie mondiale complètent ce document.

Veillez noter que les données sur les ressources forestières du Canada et les activités d'aménagement ne paraissent plus dans le *Recueil de statistiques forestières canadiennes*. Cette information est maintenant disponible dans l'*Abrégé de statistiques forestières canadiennes, Base nationale de données sur les forêts*.

Cette édition combine Le *Recueil de statistiques forestières canadiennes 1993*, le *Recueil de statistiques forestières canadiennes 1994* et le *Recueil de statistiques forestières canadiennes 1995*. Cette publication est désormais disponible à tous les deux ans, plutôt qu'annuellement. L'édition de 1993 a été photocopiée et distribuée sur demande seulement.

Plus de 130 tableaux de données forestières et économiques aux niveaux national et provincial sont inclus dans ce recueil. Les données proviennent d'environ 55 publications différentes. De même, la dernière section de ce recueil décrit brièvement les principaux termes forestiers et économiques utilisés dans les tableaux. Les facteurs nécessaires à la conversion des mesures métriques en mesures impériales et les signes conventionnels employés sont disponibles dans ce document. Le lecteur devra remarquer que les totaux peuvent ne pas être exacts, certains chiffres étant arrondis.

Afin d'augmenter la précision des données et en faciliter l'extraction, CANSIM (une banque informatisée de séries chronologiques de Statistique Canada) a été utilisée où cela était possible. Les données sur le marché des produits ont été extraites de disques compacts produits par la Division du commerce international de Statistique Canada, et les données sur la foresterie internationale proviennent d'AGROSTAT un produit de l'Organisation des Nations Unies pour l'alimentation et l'agriculture.

Certaines dispositions peuvent être prises afin de fournir l'information sur disquette en format "WordPerfect 6.1" ou "ASCII".

## KEY TO SYMBOLS

The standard symbols used by Statistics Canada have been adopted for use in this manual. They are as follows:

|        |  |
|--------|--|
| ...    | figures not appropriate or not applicable                          |
| ..     | figures not available  |
| -      | nil or zero  |
| —      | amount too small to be expressed                                   |
| p      | preliminary figures  |
| r      | revised figures  |
| x      | confidential to meet secrecy requirements under the Statistics Act |
| e      | estimated  |
| n.e.c. | not elsewhere classified   |

<sup>a</sup>As reported by sawmills and planing mills.

<sup>b</sup>Including red alder in some cases.

<sup>c</sup>Including elm and basswood (approximately 36 000 m<sup>3</sup>).

<sup>d</sup>Including white birch.

<sup>e</sup>Including elm (approximately \$1 000 000).

Note: Data not compiled by Statistics Canada for the 1987 and 1991 Survey of Manufactures.

<sup>a</sup>Included with sulphate-bleached wood pulp.

<sup>b</sup>Included with sulphite unbleached wood pulp.

<sup>c</sup>Includes other pulp.

Note: Monthly data are not revised and therefore table I-8 does not match table I-9.

# SECTION II

## COMMODITY TRADE

**Attention**

**Attention**

**Attention**

As a Contracting party to the Convention on the Harmonized Commodity and Coding System (Harmonized System or HS), Canada is obliged to conform to its statistical nomenclature. The Harmonized System went into effect in Canada on January 1, 1988. It is to be adopted by all member countries of the United Nations.

### Trade Statistics

Merchandise Trade Statistics are used to measure the change in the stock of material resources of the country resulting from the movement of merchandise into or out of Canada. They are reported and presented on Customs basis. On January 1, 1990 Canada entered into a Memorandum of Understanding (MOU) with the United States concerning the exchange of import data. As a consequence, each administration is using the other's import data to replace its own export data. Canada's international merchandise trade statistics are no longer derived exclusively from administrative records of Revenue Canada, Customs and Excise but from U.S. Customs records as well and are adjusted to conform with the National Accounts concepts and definitions. Canadian trade statistics are compiled according to the "General" system of trade as defined by the United Nations Statistical Office. This system, in principle, presents all goods entering the country (imports) and all goods leaving the country (exports).

### Definitions

**Domestic exports:** Include goods grown, extracted, or manufactured in Canada, including goods of foreign origin that have been materially transformed in Canada.

**Re-exports:** Exports of goods of foreign origin that have not been materially transformed in Canada, including foreign goods withdrawn for export from bonded Customs warehouses.

**Total exports:** The sum of Domestic exports and Re-exports.

**Imports:** Include all goods that have crossed Canada's territorial boundary, whether for immediate consumption in Canada or for storage in bonded Customs warehouses.

### Valuation

**Imported goods:** All transportation and associated costs arising in respect of the goods being appraised prior to and at the place of direct shipment to Canada are to be added to the price of the goods. Canadian imports are valued F.O.B. (free on board), place of direct shipment to Canada. The value excludes freight and insurance costs in bringing the goods to Canada from the point of direct shipment.

**Exported goods:** Valued or recorded at the values declared on export documents which usually reflect the transaction value, i.e. actual selling price, or in case of non-arm's-length transaction, the transfer price used for company accounting purposes. Most Canadian exports to overseas countries are valued at F.O.B. port of exit including domestic freight charges to that point but net of discounts and allowances. Canadian exports to the U.S.A. are valued F.O.B. place of lading net of freight charges, discounts and allowances.

### Statistical Period

The reference period is the calendar month and the calendar year.

### Country of origin/destination

**Exports** are attributed to the country that is the last known destination of the goods at the time of export. **Imports** are attributed to their country of origin, that is, the country in which the goods were grown, extracted, or manufactured, in accordance with the rules of origin specified by Revenue Canada, Customs and Excise. Prior to 1988, most imports were attributed to the country of export/consignment. The principal trade areas shown in this chapter are defined in section IX.B "User's guide - Trade area groupings."

### Province of Origin/Clearance

Prior to April 1984, **export statistics** were presented by province of lading, indicating the province in which the goods were last loaded aboard a carrier for export. Since April 1984, for most commodities, trade data are presented by province of origin which represents the province in which the goods were grown, extracted, or manufactured. **Import statistics** by province of clearance indicate the province in which the goods were cleared by Customs either for immediate consumption or for entry into a bonded Customs warehouse. This may not always coincide with the province in which the goods are consumed.

### Coding System

The Harmonized System is an international commodity classification (six-digit) developed under the auspices of the Customs Cooperation Council. It was extended to ten digits for imports to serve as the basis for Customs tariffs and international trade statistics. For export purposes the international six digit "root" was extended to eight digits. Canada adopted this system to replace the "Customs Tariff Schedule", as well as the "Canadian International Trade Classification" (CITC) and the "Export Commodity Classification" (XCC).

The Harmonized System is based on a fundamental principle - that goods are classified by what they are and not according to their stage of fabrication, use, made in Canada status, or any other such criterion.

For example, Export HS number 4407.10.31 is divided with each 'component' named as follows:

#### 4407.10.31

- 44 Chapter (Wood and Articles of Wood; Wood Charcoal)
- 4407 Heading (Wood sawn or chipped lengthwise, sliced or peeled, whether or not planed, sanded or finger-jointed, of a thickness exceeding 6 mm)
- 4407.10 Subheading (Softwood)
- 4407.10.31 Export HS Number (Spruce, pine, and fir)

On the import side, the HS number has 10 digits, where the 7th and 8th serve as the basis for Customs tariffs and the last two are for Canadian domestic purposes.

Forestry products are classified in Chapters 44, 45, 47, 48 and one item in Chapter 6.

For a list of all the possible HS numbers and their accompanying description, the reader is referred to Statistics Canada *Canadian Export Classification*, Catalogue 12-578E.

### More Information

More information concerning the "Harmonized System" is available in the manuals titled the "Customs Tariff" catalogue RV55-2/1988E (Canada Communication Group-Publishing, Ottawa, Canada K1A 0S9) and "The Canadian Export-Import Alphabetical Index" catalogue 12-579E (Statistics Canada) or by contacting the International Trade Division, Statistics Canada, Ottawa, Canada K1A 0T6.

In addition to the above-mentioned change, users should note that the country classification has been expanded to resemble the classification developed by the International Organization for Standardization (ISO) which has been adopted by most of the trading countries for Customs purposes.

### Comparison of HS codes and XCC codes

The Harmonized System allows for more detailed information than the Export Commodity Classification System. Both sets of codes are compared as well as the major discrepancies on the following pages.

## COMPARISON OF HS CODES AND XCC CODES

| Forest products                     | Harmonized system commodity classification codes (HS)<br>(since 1988)  | Export commodity classification (XCC)<br>(1960-1987)   |

## DISCREPANCIES BETWEEN THE HARMONIZED SYSTEM (HS) AND THE EXPORT COMMODITY CLASSIFICATION (XCC)

The product code classification under the HS and the XCC is not strictly analogous and in some instances not comparable at all. The new HS classification offers more details and subgroups than the old XCC. During the conversion, we maintained the product groupings to minimize the discrepancies in the time series. Some arbitrary decisions were taken under the guidance of Statistics Canada in order to avoid splits and to make the HS conform to our specifications. Subgroupings not available in the XCC were introduced in the HS.

### Major changes and/or additions:

|                                       |  |
|---------------------------------------|--|
| <b>Fibreboard:</b>                    | <p>HS 4411.11.00 to 4411.99.00</p> <p>Definition: "Most often manufactured from wood chips which have been mechanically defibred (defibrated) or steam exploded or from other defibred ligno-cellulosic material".</p> <p>Because of the previous lack of details in this category, most of the products under this new heading used to appear in "Building paper and board". They will now be part of "Other wood-fabricated materials" under the heading "Fibreboard".</p>   |
| <b>Wood pulp:</b>                     | <p>Includes mechanical and chemical pulp. Semi-chemical pulp was left as a component of the chemical pulp category.</p> <p>Mechanical - HS 4701.00.00 - mechanical pulp<br/>                           4706.10.00 - cotton linters pulp<br/>                           4706.91.00 - mechanical pulp of other fibrous cellulosic material</p> <p>Chemical:<br/>                           - chemical</p> <p style="padding-left: 40px;">HS 4702.00.00 - dissolving grades</p> <p>4703.00.00 - sulphate other than dissolving grades</p> <p>4704.00.00 - sulphite other than dissolving grades</p> <p>4706.92.00 - of other fibrous cellulosic material</p> <p style="padding-left: 40px;">- semi-chemical</p> <p style="padding-left: 40px;">HS 4705.00.00 - semi-chemical<br/>                           4706.93.00 - of other fibrous cellulosic material</p> |
| <b>Building paper and paperboard:</b> | <p>Formerly "Building paper and board". The fibreboard component along with all other building materials without a paper base were removed from the definition in order to truly reflect the paper content of Chapter 48 of the HS.</p>  |
| <b>Other paper products:</b>          | <p>Broader definition than previously. It includes all the residual components of Chapter 48. Since the HS offers many more details, the data are now more complete. This category includes all the products made out of paper and not included in other headings (handkerchiefs, cleansing or facial tissues, serviettes, clothing accessories, etc.).</p>  |

<sup>a</sup>Apparent domestic consumption = Production + Imports - Exports.

<sup>b</sup>Export data used in the calculation of newsprint consumption are from the Canadian Pulp and Paper Association.

## SECTION III

### PRINCIPAL STATISTICS

#### Attention

#### Attention

#### Attention

The **Survey of Manufactures** is an annual survey of establishments primarily engaged in manufacturing, together with associated head offices, sales offices, and auxiliary units classified to manufacturing industries according to the SIC. An establishment, usually a plant or a mill, is the smallest operating unit for which it is possible to provide a specified range of basic industrial statistics (essentially, employment data and the elements of input and output necessary to calculate value added).

In this section, 1970-1981 data have been compiled according to the **1970 version** of the *Standard Industrial Classification* (SIC), 1982 to date data according to the **1980 version**.

#### Major Changes Affecting 1987 and 1988 Surveys

Statistics Canada redesigned its surveys of economic production. The Annual Survey of Manufactures was included within the ambit of this major initiative. The main purpose of the redesign was to achieve greater consistency and comparability among the various economic surveys, which was addressed principally by trying to develop more equal survey coverage of the various sectors of the economy.

The objectives are to ensure that adequate attention is paid to larger establishments who are responsible for the major share of manufacturing activity and to decrease the burden on small companies by the use of short, simple questionnaires, by the use of sampling, and by the use of administrative records from Revenue Canada.

The design specifications of the new survey frame were implemented for the 1987 Annual Survey of Manufactures. This meant that not only were fewer long-form questionnaires used for the 1987 survey than had been the norm for previous years, but the change in long-form coverage for individual province-by-industry cells was often significant. The data yielded by long forms is much more complete than from other sources; thus the change in the mix of questionnaire types resulted in a one-time break between the 1987 data and that of previous years.

#### Principal Considerations: Logging Industry

The principal statistics for logging are on a comparable basis for 1987 and 1988. However, there is a break between the revised 1987 levels and the data previously published for 1986, due to a significant change in the methodology.

Traditionally, Statistics Canada was alerted to the existence of a new business when application was made to Revenue Canada for a payroll deduction (PD) account number. The issuance of a PD number resulted in the business being added to Statistics Canada's list and ultimately being surveyed by them.

This process was known to contain certain conceptual flaws. One of them, the existence of establishments with no employees, has a direct bearing on the logging industry.

Under the new methodology, the information is drawn from Revenue Canada's records. This information (some of it based on sampling), coupled with survey results for large establishments, serves as the basis for the industry estimates. Revenue Canada's data are more complete and significantly reduce response burden. As a direct result of the improved ability to obtain data for small, unincorporated businesses, the number of establishments and the employment data changed considerably. Since the improvement came at the small end of the scale, there was less of an impact on shipments and costs.

The wood industries and the paper and allied industries were not affected by these changes.

**Data Availability 1987-1988**

Reduction in the resources available for processing the 1987 survey meant that only principal statistics were published.

The more comprehensive array of variables reappeared with the 1988 data.

**Detailed definitions** of all industries covered by this section can be found in the publication "Standard Industrial Classification, 1980," Catalogue 12-501.

The **headings** used in the principal statistics tables are **briefly described** in section IX.A, "User's guide - Definition of terms." For detailed definitions and some qualifications to the preceding explanations, see "Concepts and Definitions of the Census of Manufactures," Catalogue 31-528.

<sup>a</sup>Logging, wood industries, and paper and allied industries.

<sup>b</sup>Excluding working owners and partners.

<sup>c</sup>With the exception of "logging", the value of manufacturing shipments was estimated by the Canadian Forest Service.

## SECTION IV

### EMPLOYMENT

#### Labour Force Survey

Labour Force Survey statistics are based on information obtained through a sample survey of households. Interviews are carried out in about 52 000 representative households across the country.

The sample used in the surveys of the labour force has been designed to represent all persons in the population 15 years of age and over residing in Canada, with the exception of the following: residents of the Yukon and Northwest Territories, persons living on Indian reserves, inmates of institutions, and full-time members of the armed forces.

A comprehensive description of the design of the Labour Force Survey, and a complete list of Self-Representative Units, can be found in "Methodology of the Canadian Labour Force Survey," Statistics Canada, Catalogue 71-526, Ottawa, 1990.

**Employment:** Employed persons are those who, during the reference week, a) did any work at all; b) had a job, but were not at work due to own illness or disability, personal or family responsibilities, bad weather, labour dispute, vacation, or other reasons (excluding persons on layoff and those with a job to start at a definite date in the future).

#### Survey of Manufactures

The Survey of Manufactures is an annual survey of the manufacturing industries of Canada.

Data are accepted for any fiscal year ending not earlier than April 1 of the reference year, nor later than March 31 of the following year. However, data on small establishments based on financial statements submitted to Revenue Canada relate to the taxation year, that is, any reporting year ending in the calendar year. These practices should be kept in mind in comparing census data with those compiled on a calendar-year basis.

For detailed definitions and some qualifications to the preceding explanations, see Concepts and Definitions of the Census of Manufactures, Catalogue 31-528.

**Employment:** Excludes working owners and partners of unincorporated businesses, which are separately tabulated, and outside pieceworkers. Respondents are asked for average number employed during the year. Production and related workers in manufacturing activity include those at the establishment engaged in processing, assembling, storing, inspecting, handling, packing, maintenance, repair, janitorial and security services, and working foremen. Administrative office and other non-manufacturing employees include all functions at head offices, sales offices, and auxiliary units as well as cafeteria workers, research personnel, truck drivers, etc.

## **SECTION V**

### **SELLING PRICE INDEXES AND ANNUAL AVERAGE PRICES**

The Industrial Product Price Indexes measure price changes for major commodities sold by Canadian manufacturers. Elemental indexes are calculated for 1314 Principal Commodity Group outputs as defined in the 1981 Input/Output (I/O) table. Weights used to aggregate commodity indexes are taken from the output or "Make" matrix of the I/O system which provides an integrated set of commodity values for all manufacturing industries.

About 10 000 prices are collected monthly from about 3 000 producers for goods sold which are valued at the boundary of the establishment, so that the cost of taxes collected at that point and transportation provided by public carriers beyond that point are excluded. Prices are reported in great detail for some transactions, enabling both the goods and the terms of sale to be identified. Such collections are instituted for important commodities. The sample size is increased where price movement has a regional aspect or where there are large flows of goods to export markets.

Sampling for the direct survey of an elemental indicator is usually done by a formal probability sampling procedure, wherein important producers are "must take" respondents and a random selection is made of the smaller producers. Such samples are redesigned according to a regular cycle as dictated by changes in the market. A given elemental indicator is usually supported by 12 to 15 price quotes, although some are derived from as few as 8 quotes or as many as 30 quotes.

The 1986 = 100 industry aggregation of elemental commodities can be directly related to the 1981 = 100 Industry Selling Price Indexes which are available from 1956 to 1990. Link factors, derived from the relationship of the two series in January 1986, were published in the July and December issues of Catalogue 62-011.

In 1988, the time series related to forest products have been modified to accommodate actual needs. The new time series are only available as of 1981.

## SECTION VI

### FINANCIAL STATISTICS AND ECONOMIC INDICATORS

- **Capital and repair expenditures**
- **Contribution to Canadian Gross Domestic Product**
- **Corporate profits and profitability**
- **Economic indicators**
- **Income taxes**

#### Gross Domestic Product

Since 1986, the gross domestic product (GDP) has replaced the gross national product (GNP) in table VI-6 as a measure of the Canadian collective income. This change is in accordance with the System of National Accounts of Statistics Canada and with the international practice recommended by the United Nations.

According to Statistics Canada, the GDP allows for a better analysis of the economic performance of the country as it measures the production originating in the country, whereas the GNP is adjusted for the flow of interests and incomes crossing the national border.

In tables VI-6, VI-7, VI-8 and VI-9, you will notice that the national GDP is shown to be greater than the sum of the provincial GDPs. This is mainly because the domestic territory of the country is defined to include embassies and military bases on foreign soil. Thus there is Canadian domestic production that does not occur within the geographic boundaries of any province or territory.

Statistics Canada's change of approach results in an upward revision of the aggregate estimations. New surveys and information sources have allowed re-examination of the data from 1961 until 1985. The major sources of change are: day care fees, unrecorded income in construction, indirect taxes and investment income of municipalities, and residential repairs.

More details are available from Statistics Canada, catalogue 13-001, first quarter 1986, and catalogue 13-213.

**VI - 1. Corporate Profits and Profitability<sup>a</sup> - Forest Industries<sup>b</sup>, 1970-1991**

<sup>a</sup>Includes Northwest Territories and Yukon.

<sup>b</sup>Preliminary actual 1992, followed by revised intentions for 1993.

<sup>c</sup>Included in Prairie provinces.

Note: Data beginning in 1991 are not strictly comparable to historical series due to a change in estimation methodology and switch from 1970 SIC to 1980 SIC.

<sup>a</sup>A 1981 "Census Farm" is defined as a farm, ranch, or other agricultural holding with sales of agricultural products during the past 12 months of \$250 or more.

<sup>b</sup>Includes sales of Christmas trees, fuelwood, and logs, and income from stumpage leases where an agreed amount is paid for cutting timber or pulpwood from the land. It excludes the sales of maple products.

## **SECTION VIII**

### **WORLD FORESTRY**

The world forestry figures were retrieved from the "1993 Yearbook of Forest Products." Publication of the yearbook is made possible by the cooperation of various governments, which supplied most of the information in the form of replies to questionnaires. The Forestry Department of the Food and Agriculture Organization of the United Nations (FAO) in collaboration with the Economic Commission for Europe compiled the results.

The products are classified using the "United Nations Standard International Trade Classification (SITC) Revision 2."

<sup>a</sup>See Section IX.B for details on groupings of trade areas used in this table.

Note: Canada accounts for only 1.9% of total world imports of forest products.  
Total Forest Products includes other fibre pulp.

## USER'S GUIDE

---

### A . Definitions of terms

**Balance of trade:** The difference between the dollar, or money, value of a country's exports and imports of merchandise or of goods and services. If a country exports more than it imports, it has a trade surplus; if it imports more than it exports, it has a trade deficit. The balance of trade is an important part of a country's overall balance of payments. (International Trade Division)

**Cansim (Canadian Socio-Economic Information Management System):** A fully computerized data bank of Statistics Canada's current and historical information from its most widely used series of statistics.

**Constant dollar:** Represents the value of expenditure or production measured in terms of some fixed base period's prices. (Changes in constant dollar expenditure or production can only be brought about by changes in the physical quantities of goods purchased or produced.)

**Consumer price index:** Measures the rate of change in a typical basket of consumer goods and services, including housing, food, and health care. It can be broken down into food and nonfood items, goods and services, and other components.

**Domestic exports:** Include goods grown, extracted, or manufactured in Canada, including goods of foreign origin that have been materially transformed in Canada.

**Employment, census of manufactures:** Excludes working owners and partners of unincorporated businesses, which are separately tabulated, and outside pieceworkers. Respondents are asked for average number employed during the year. Production and related workers in manufacturing activity include those employees at the establishment engaged in processing, assembling, storing, inspecting, handling, and packing products and in maintenance, repair, janitorial, and security services; and working foremen. (Outside pieceworkers' remuneration is included in cost of materials.) Administrative office and other non-manufacturing employees include all functions at head offices, sale offices, and auxiliary units as well as cafeteria workers, research personnel, truck drivers, etc.

**Employment, labor force survey:** Persons who, during the reference period, a) did any work at all, for pay or profit in the context of an employer-employee relationship, or were self-employed (including unpaid family work, which is defined as work contributing directly to the operation of a family farm, business, or professional practice owned or operated by a related member of the household); or b) had a job but were not at work due to own illness or disability, personal or family responsibilities, bad weather, labor dispute, or other reasons (excluding persons on layoff and those with a job to start at a future date).

**Establishment:** The smallest unit capable of reporting certain specified input and output data; usually a plant or mill. Numbers for 1975 declined owing to the exclusion of existing establishments deemed to have no paid employees. Principal statistics of an establishment active in more than one municipality are prorated to "quasi-establishment" locations, which are treated as establishments in compilations. (Survey of Manufactures)

**Fuel and electricity (cost of):** Consumption of purchased fuel and electricity only, at laid-down cost including transportation and handling charges, duties, etc. Applies to large establishments only. Data for nonmanufacturing activity are included under manufacturing activity except where an ancillary office uses a separate "head office" report. In this latter case, the fuel reported is included under cost of materials for "Total Activity" only. (Survey of Manufactures)

**Hardwood(s):** Trees belonging to the botanical group Angiospermae with broad leaves usually all shed annually. Also, stands of such trees and the wood produced by them.

**Implicit price index:** The most comprehensive of all the indicators available in Canada for measuring price change, because it covers the entire range of goods and services produced and sold in the economy. It is, therefore, used as a measure of price change taking place in the economy as a whole. Moreover, implicit price indexes are available for each of the main expenditure components of Gross National Product. Therefore, this set of indicators can be used to trace and identify pressure points among the principal areas of demand as they are seen to be associated with inflationary developments in the economy.

**Imports:** Include all goods that have crossed Canada's territorial boundary, whether for immediate consumption in Canada or stored in bonded Customs warehouses. (International Trade Division)

**Indirect taxes:** Taxes that represent a business cost or that are incorporated into prices at the retail level are taken here as indirect. They constitute, in effect, taxes on expenditures.

**Lumber:** The product of saw and planing mills that is not further manufactured beyond sawing, resawing, passing lengthwise through a standard planing machine, crosscutting to length, and matching.

**Materials and supplies (cost of):** Generally, consumption of purchased items only at laid-down cost including transportation and handling charges, duties, etc. Includes transfers between units of the same company and work done on contract by others. At the manufacturing activity level, this item represents purchased items used in manufacturing operations. (Survey of Manufactures)

**Mechanical wood pulp:** The production of fibers and fiber bundles by grinding wood with pulpstones or by mechanical refiners as opposed to chemical methods.

**Paper:** Generally, a matted or felted sheet of vegetable fiber, formed on a screen from a water suspension, used for writing and printing as well as for wrapping and many other purposes. Paper is one of two broad subdivisions of the general term "paper"; the other is paperboard.

**Paperboard:** A general term describing sheets made of fibrous material 0.012 in. (0.3 mm) or more in thickness. Compared with paper, paperboard is heavier per unit area, thicker, and more rigid. Paperboard is the term used to describe any single variety, or group of varieties, of board materials used in the production of boxes, folding cartons, and solid fiber and corrugated shipping containers.

**Particleboard:** A generic term for a panel manufactured from lignocellulosic materials - commonly wood - essentially in the form of particles (as distinct from fibers). These materials are bonded together with synthetic resin or other suitable binder, under heat and pressure, by a process wherein the interparticle bonds are created wholly by the added binder.

**Plywood:** A composite panel or board made up of cross-banded layers or plies, bonded with an adhesive, of veneer only, or veneer in combination with a core of lumber, or of particleboard. Generally the grain of one or more plies is roughly at right angles to that of the other plies. An odd number of plies is almost always used.

**Production and related workers:** See Employment, Survey of Manufactures.

**Re-exports:** Exports of goods of foreign origin that have not been materially transformed in Canada, including foreign goods withdrawn for export from bonded Customs warehouses. (International Trade Division)

**Roundwood:** Sections of tree stems, with or without bark. Includes logs, bolts, posts, pilings, and other products still "in the round."

**Salaries and wages:** These are compiled before deductions for income tax and employee-paid portions of both employee benefits and social insurance. They include payments for regular work, overtime, and paid leave as well as bonuses, commissions paid to regular employees, severance pay, etc. Withdrawals of working owners and partners of unincorporated businesses are excluded. (Survey of Manufactures)

**Selling price index:** An index that shows changes in the overall inflation rate or the rate of price change for a particular sector of the economy, with the base year equal to 100.

**Semichemical pulp:** Pulp obtained by mild treatment of wood chips by any of the chemical pulping processes, which remove only part of the lignin from the wood chips, followed by mechanical treatment to complete the separation of individual cellulose fibers.

**Shakes:** In construction, a type of shingle usually hand split from a bolt and used for roofing or weatherboarding.

**Shingles:** Thin, rectangular pieces of wood, sawn along the grain and tapering in thickness, used like tiles for roofing and weatherboarding.

**Softwood(s):** Cone-bearing trees with needle- or scale-like leaves belonging to the botanical group Gymnospermae. Also, stands of such trees and the wood produced by them.

**Subsidies:** Direct or indirect payments or other assistance to someone to produce goods or services - to benefit the consumer by lower prices, to protect producers against a decline in the price of their products, to encourage certain types of economic production, or to promote certain types of socially desirable activity.

**Sulphate (kraft) pulp:** A chemical wood pulp obtained by cooking wood chips at high temperature in a solution of sodium hydroxide and sodium sulfide.

**Sulphite pulp:** A chemical wood pulp obtained by cooking wood chips in a bisulfite-sulfurous acid solution.

**Total exports:** The sum of domestic exports and re-exports. (International Trade Division)

**Value added, manufacturing activity:** Value of shipments of goods of own manufacture plus net change in inventory of goods in process and finished goods, less cost of materials and supplies used, fuel, and electricity. (Survey of Manufactures)

**Value added, manufacturing activity:** Value of shipments of goods of own manufacture plus net change in inventory of goods in process and finished goods, less cost of materials and supplies used, fuel, and electricity. (Survey of Manufactures)

**Value added, total activity:** Consists of value added, manufacturing activity and value added, nonmanufacturing activity. The latter is calculated by subtracting relevant commodity inputs from nonmanufacturing revenue or output; these commodity inputs are net of the change in inventories of goods purchased for resale. Nonmanufacturing revenues include depreciable fixed assets produced by own work force for own use, revenue from product rentals, etc., but exclude nonoperating revenue such as real property rentals, dividends, and interest. (Survey of Manufactures)

**Value of shipments of goods of own manufacture:** Net selling value of goods made by reporting establishment, or for its account, from its own materials. Excludes discounts, returns, allowances, sales tax, excise taxes and duties, returnable containers, and common or contract carriers' charges for outward transportation (but not own carriers' delivery expense). Includes repair and custom revenue, transfer to reporting units of same firm, all exports, and book value of own products shipped the first time on a rental basis. Includes consignment shipments to other countries, but domestic consignment shipments are included in inventory units sold. (Survey of Manufactures)

**Veneer:** A thin layer or sheet of wood.

**Waferboard:** A type of particleboard composed of wafers cut from roundwood bolts (mostly poplar) of uniform length and thickness resembling small pieces of veneer. The wafers are bonded together with resin binder, under heat and pressure, by a process similar to that by which particleboard is made.

**Working owners and partners:** Include only those active in unincorporated businesses. (Survey of Manufactures)

## B. Trade area groupings

This is a selection of trade area groupings used in this publication.

Countries are arranged primarily according to geographical location. The country classification employed does not reflect the views or intentions of the Government of Canada on international issues of recognition, sovereignty, or jurisdiction. The trade areas shown in section II (Statistics Canada) and section VIII (FAO) include groupings that are defined as follows:

**Central America<sup>a</sup>:** Anguilla, Antigua and Barbuda, Bahamas, Barbados, Belize, Bermuda<sup>b</sup>, British Virgin Islands<sup>b</sup>, Cayman Islands<sup>b</sup>, Costa Rica, Cuba, Dominica, Dominican Republic, El Salvador, Grenada<sup>b</sup>, Guadeloupe, Guatemala, Haiti, Honduras, Jamaica, Martinique, Mexico, Montserrat<sup>b</sup>, Netherlands Antilles (includes Aruba), Nicaragua, Panama, Puerto Rico, Saint Lucia<sup>b</sup>, St. Kitts-Nevis<sup>b</sup>, St. Vincent and the Grenadines<sup>b</sup>, Trinidad and Tobago, Turks and Caicos Islands<sup>b</sup>, and United States Virgin Islands<sup>b</sup>.

**China, People's Republic:** China and Mongolian People's Republic.

**Other Europe<sup>a</sup>:** Albania, Bulgaria, former Czechoslovakia (includes the Czech Republic and the Slovak Republic), Germany (East)<sup>d</sup>, Hungary, Poland, and Romania, as well as Austria, Gibraltar, Iceland, Malta, Switzerland (includes Liechtenstein), and former Yugoslavia<sup>a</sup> (includes Slovenia, Croatia, Bosnia' Hercegovina, and Macedonia).

**European Union (EU) -- formerly referred to as European Economic Community (EEC) :** Belgium-Luxembourg, Denmark (includes Faeroe Islands), France (includes Andorra and Monaco), Germany<sup>e</sup>, Greece<sup>c</sup>, Ireland, Italy (includes San Marino and Vatican City State), Netherlands, Portugal<sup>f</sup>, Spain<sup>c</sup>, and United Kingdom.

**Middle East - African part:** Egypt, Ethiopia, Libyan Arab Jamahiriya, Somalia, and Sudan.

**Middle East - Asian part:** Bahrain, Cyprus, Emirates (United Arab), Iran (Islamic Republic), Iraq, Israel, Jordan, Kuwait, Lebanon, Oman, Qatar, Saudi Arabia, Syrian Arab Republic, Turkey, Yemen South, and Yemen North.

**Oceania:** Australia, Cocos Islands, Nauru, New Zealand, and Norfolk Island.

**Other Africa:** Algeria, Angola, Benin, Botswana, British Indian Ocean Territory<sup>b</sup>, Burkina Faso<sup>b</sup>, Burundi, Cameroon, Cape Verde, Central African Republic<sup>b</sup>, Chad, Comoros, Congo, Côte-d'Ivoire, Djibouti, Equatorial Guinea, French Southern and Antarctic Territories<sup>b</sup> (includes Bouvet Island), Gabon, Gambia, Ghana, Guinea, Guinea-Bissau, Kenya, Lesotho, Liberia, Madagascar, Malawi, Mali, Mauritania, Mauritius, Morocco, Mozambique, Namibia<sup>b</sup>, Niger, Nigeria, Reunion, Rwanda, St. Helena<sup>b</sup>, Sao Tome and Principe, Senegal, Seychelles<sup>b</sup>, Sierra Leone, South Africa, Swaziland, Tanzania (United Republic), Togo, Tunisia, Uganda, Western Sahara<sup>b</sup>, Zaire, Zambia, and Zimbabwe.

**Other Oceania:** American Samoa<sup>b</sup>, Cook Islands<sup>b</sup>, Fiji, French Polynesia, Guam<sup>b</sup>, Kiribati<sup>b</sup>, New Caledonia, Niue<sup>b</sup>, Papua New Guinea, Pitcairn Island<sup>b</sup>, Solomon Islands, Tonga, Tokelau<sup>b</sup>, United States Minor Outlying Islands<sup>b</sup>, Vanuatu, Wallis and Futuna Islands<sup>b</sup>, and Western Samoa<sup>b</sup>.

**Scandinavia:** Finland, Norway, and Sweden.

**South America:** Argentina, Bolivia, Brazil, Chile, Colombia, Ecuador, Falkland Islands<sup>b</sup> (Malvinas), French Guiana, Guyana, Paraguay, Peru, Surinam, Uruguay, and Venezuela.

**South East Asia:** Brunei Darussalam, Indonesia, Malaysia, Philippines, Singapore, and Thailand.

**Other Countries not elsewhere specified:** St. Pierre and Miquelon, Greenland, and former USSR<sup>f</sup>.

<sup>a</sup>To facilitate the comparison with certain studies published by the FAO, Mexico is assigned to Central America instead of North America, and the former USSR is shown outside Europe.

<sup>b</sup>Country names coded only in Statistics Canada publications.

<sup>c</sup>Greece joined the EU on January 1, 1981, and Portugal and Spain on January 1, 1986.

<sup>d</sup>Germany (East) as of October 1990 is included under Germany.

<sup>e</sup>Formerly Federal Republic of Germany. Starting in October 1990, includes trade with Germany (East).

<sup>f</sup>Former USSR includes: Armenia, Azerbaijan, Estonia, Latvia, Lithuania, Belarus, Ukraine, Georgia, Kazakhstan, Kyrgyzstan, Moldavia, Russia, Tajikistan, Turkmenistan, Uzbekistan.

### Shipments of roundwood in British Columbia

Beginning in 1980, the operations of "log supply divisions" in the British Columbia coastal region are treated as merchandising activity rather than logging activity. This change has been implemented to eliminate sizeable duplications in logging inputs and shipments. Involved are four establishments (in some of the earlier years there were five establishments). The "log supply divisions" are administrative units that control the distribution of roundwood and wood chips, from each firm's own logging establishments plus outside purchases and some contractor production, to their wood-using mills. Under the procedure used prior to 1980, the shipments by logging establishments to log supply establishments were duplicated by the shipments from the "log supply divisions" to the wood-using mills, although in effect they were only book transfers. The revised figures for 1970-1979 eliminate this duplication.

### Discrepancies between production and shipments of roundwood figures

Several explanations for the inconsistency between production and shipments figures are:

1. Inventories fluctuations.
2. Measurement methods vary from province to province. Some firms use methods recommended by provincial governments, but these methods do not always conform to Statistics Canada requirements. Therefore, Statistics Canada must develop its own conversion factors so that it can use the data for analyses and comparisons.
3. Production data are estimates of all logging operations (we arrived at these estimates using information obtained from the provinces and from Statistics Canada), while shipments comprise only quantities declared by firms whose primary activity is logging. Shipments made by small businesses, whose operations are reported in terms of dollar values, and those made by firms to their subsidiaries as part of a vertical integration, are not taken into account. Each of these factors is responsible for lowering the figures by approximately 10 to 15%.
4. Some small businesses have such low production that they are not included in Statistics Canada surveys.

**The National Library of Canada has catalogued this publication as follows:**

Main entry under title:

Selected forestry statistics, Canada . . .

Irregular

Description based on; 1984.

Issued also in French under title; Recueil de statistiques forestières canadiennes. . .

Includes bibliographical references.

ISSN 0834-938X

ISBN 0-662-23918-0

Cat. N. Fo29-7/48E
