PH: (403) 435-7210

## ACKNOWLEDGEMENTS

The authors wish to thank those companies, government departments and individuals for their assistance in the preparation of this directory. Detailed information which forms the basis of this report was provided by industry on their operations in 1973. Similarly, the provision of information by the Alberta Department of Lands and Forests, the Saskatchewan Department of Tourism and Renewable Resources, the Saskatchewan Department of Northern Saskatchewan, and the Manitoba Department of Mines, Resources and Environmental Management is acknowledged. The encouragement of Mr. D. G. Wyllie (Saskatchewan D.T.R.R.), Mr. F. W. McDougall (Alberta D. of F.) and Mr. R. J. O'Regan (Manitoba D.M.R.E.M.) is appreciated.

The important contributions of Mr. B. W. Karaim, Forest Economics Research Group, in preparing maps and tables and assisting with data collection and the patience and efficiency of Ms. G. McCorrister in typing this Directory are gratefully acknowledged.

A. G. Teskey

J. H. Smyth

May 31, 1974

## ORGANIZATION OF THE DIRECTORY

The directory consists of two sections: an executive summary and a detailed listing of industry and provincial governments utilizing and managing the forest resources of West-Central Canada. The executive summary briefly outlines the existing status of the industry, its present and future development and its production pattern in the last decade. The second section lists management personnel of the respective provincial government departments responsible for managing the public forest lands and all major wood operations utilizing primary wood. In the case of larger establishments, detailed information on management personnel, labour force, production and markets is provided. For easier access, each province is allotted different coloured paper - pink for Alberta, blue for Saskatchewan and yellow for Manitoba.

This directory retains the basic format of a similar directory published in 1973 entitled, "A Directory of Primary Wood-Using Industries in Alberta, Saskatchewan and Manitoba, 1972". However, this edition has expanded its coverage of industry, added detail on machinery and equipment and described the employment provided by months of operation and type of activity. Given the excellent reception of last year's directory by industry and government alike, it is hoped that this updated version will better meet the needs of these two sectors.

## EXECUTIVE SUMMARY

### CURRENT STATUS OF FOREST INDUSTRY IN WEST-CENTRAL CANADA

- More than 700 wood-using mills and plants depend on the forests of West-Central Canada (Table 1).
- 49 sawmills and planing mills each produced more than 5,000,000 boardfeet of lumber in 1973. Some companies in this group produced in excess of 100 million boardfeet.
- Comparing the number of mills and plants, Alberta and Saskatchewan are almost equal in number at 297 and 300 respectively, while Manitoba has only 127.
- Alberta dominates the sawmill and planing mill industry in West-Central Canada having 40 of the 49 larger producing mills.
- The majority of the wood treatment operations are in Saskatchewan and Alberta, which together account for 15 of the 18 plants in the region.
- In 1973, Alberta was the only province in the region having a veneer and plywood industry.
- The only particleboard (flakeboard) plant operating in the region is located at Hudson Bay, Saskatchewan.
- West-Central Canada's only newsprint mill is situated at Pine Falls, Manitoba. Kraft pulp is produced in all three provinces. Alberta accounts for 53%, Saskatchewan 31% and Manitoba 16% of total capacity.

FOREST PRODUCTION IN WEST-CENTRAL CANADA

Primary forest production has expanded rapidly in all three provinces during the last decade (Figure 1), particularly since 1968. Increasing from 160 million cubic feet in 1964 to over 300 million in 1973, total round wood utilization in West-Central Canada has supported expansion in all sectors of the forest products economy.

Detailed data on lumber and pulpwood production for this period in Alberta, Saskatchewan and Manitoba are recorded in Tables 2, 3 and 4, respectively.

CURRENT AND PROPOSED DEVELOPMENTS

New developments in the forest industry are summarized in Table 5. As indicated, some are proposals, others are under construction, and still others are or will be in production shortly. In total, these projects represent a capital investment of \$45 million and will generate direct employment in excess of 1,500 permanent jobs. Employment multipliers generated from various forest industry studies in other parts of Canada suggest that a possible 1,500 jobs associated indirectly with the industry could be created when expansion of existing plants and new developments come on stream.
