Forestry Canada

Forestry Canada is the main focus for forestry matters in the federal government. It provides national leadership through the development, coordination, and implementation of federal policies and programs to enhance long-term economic, social, and environmental benefits from the forest sector for Canadians.

Forestry Canada is a decentralized organization with six regions, two national research institutes, and seven regional sub-offices located across Canada. Headquarters is located in the National Capital Region in Hull, Quebec.

In support of its mandate, Forestry Canada carries out the following activities:

- administers forest development agreements negotiated with the provinces
- undertakes and supports research, development, and technology transfer in forest management and utilization
- compiles, analyzes, and disseminates information about national and international forest resources and related matters
- monitors disease and insect pests in Canada's forests
- provides information, analyses, and policy advice on economics, industry, markets, and trade related to the forest sector
- promotes employment, education, and training opportunities in the forest sector
- promotes public awareness of all aspects of the forest sector.

Forestry Canada interacts regularly with provincial and territorial governments, industry, labour, universities, conservationists, and the public through such bodies as the Canadian Council of Forest Ministers, the Forest Sector Advisory Council, the Forestry Research Advisory Council of Canada, the Canadian Forest Inventory Committee, the Canadian Committee on Forest Fire Management, the Canadian Interagency Forest Fire Centre, and regional consultative committees. Forestry Canada is also active in international forestry agencies such as the International Union of Forestry Research Organizations and the Food and Agriculture Organization of the United Nations, as well as in technical and trade missions.

Forêts Canada

Forêts Canada est l'organisme principal en matière de foresterie à l'intérieur du gouvernement fédéral. Chef de file sur le plan national, il assure la préparation, la coordination et la mise en oeuvre des politiques et des programmes fédéraux dans le but d'améliorer les avantages économiques, sociaux et environnementaux à long terme offerts aux Canadiens par le secteur forestier.

Forêts Canada est une organisation décentralisée: six régions, deux instituts de recherche nationaux ainsi que sept sous-bureaux régionaux sont répartis dans tout le Canada. L'administration centrale est établie dans la région de la Capitale nationale, à Hull (Québec).

Pour remplir son mandat, Forêts Canada assume les tâches suivantes:

- il administre les accords de développement forestier conclus avec les provinces
- il entreprend et appuie la recherche, la mise au point et le transfert technologique dans le domaine de la gestion et de l'utilisation des forêts
- il rassemble, analyse et diffuse de l'information sur les ressources forestières nationales et internationales et les domaines connexes
- il fait des relevés des maladies et des insectes ravageurs des forêts canadiennes
- il fournit de l'information, des analyses et des conseils (quant aux politiques) concernant l'économie, l'industrie, les marchés et le commerce reliés au secteur forestier
- il favorise les occasions d'emploi et de formation universitaire et technique dans le secteur forestier
- il encourage les Canadiens à prendre conscience de tous les aspects du secteur forestier.

Forêts Canada entretient des rapports sur une base régulière avec les gouvernements provinciaux et territoriaux, l'industrie, le monde du travail, les universités, les environnementalistes et le public par l'entremise d'organismes comme le Conseil canadien des ministres des Forêts, le Conseil consultatif du secteur forestier, le Conseil consultatif de la recherche forestière du Canada, le Comité de l'Inventaire des forêts du Canada, le Comité canadien de la gestion des incendies de forêt, le Centre interservices des feux de forêt du Canada et des comités consultatifs régionaux. Forêts Canada joue également un rôle actif dans des organismes internationaux de foresterie comme l'Union internationale des instituts de recherches forestières et l'Organisation des Nations Unies pour l'alimentation et l'agriculture, de même qu'au sein de délégations de nature technique ou commerciale.

Want To Know More?

Selected Forestry Statistics Canada 1990 is published by the Economics and Statistics Directorate of Forestry Canada. The material presented is drawn from statistics covering mainly the period 1970-1989.

This edition combines Selected Forestry Statistics Canada 1989 and Selected Forestry Statistics Canada 1990.

These publications are also available: Forestry Facts, revised May 1990, is an easy-to-read "pocket-size" compendium of interesting and useful facts about the forestry sector in Canada. It shows Canada's place in the global context and a comprehensive national overview of Canada's forestry sector. It is packed with capsule statistics organized by industry segment and by province or territory. A snapshot overview is also presented in the brochure entitled, Canada's Forests.

If you need to know more about these statistics, contact the Forestry Canada Office nearest you.

Copies of these publications may be obtained at no charge from the following address:

ABSTRACT

Selected Forestry Statistics Canada 1990 contains the most current statistics available as of December 1990 and relates to a series of tables on Canadian forest resources and management activities, commodity production, shipments and trade, principal and employment statistics by industry sector, as well as selling price indexes, financial statistics, and economic indicators. Some transportation, construction, and international data complete the picture.

This edition combines Selected Forestry Statistics Canada 1989 and Selected Forestry Statistics Canada 1990.

Over 145 tables of forest economic data at the national and provincial levels are included in the report. Data have been extracted from approximately 55 different publications. A number of charts have been included to help the reader visualize the information. In addition, the last section of this publication describes the main forestry and economic terms used in the tables. The conversion factors used to convert from metric to imperial measure and the standard symbols used are available on page V. The reader should note that the columns of figures may not always sum exactly due to rounding.

To increase the precision and facilitate the retrieval of time series data, CANSIM (a computerized data bank of Statistics Canada) was used wherever possible. The tables of commodity data were retrieved from computer tapes produced by Statistics Canada's International Trade Division and the world statistics were retrieved from a computer tape produced by the Food and Agriculture Organization of the United Nations.

This year, section III "Commodity trade" and section IV "Principal statistics" were particularly affected by changes in methodology undertaken by Statistics Canada.

Information given at the beginning of the relevant sections highlights recent changes.

Arrangements can be made to provide the information on diskette in Wordperfect 5.1 or ASCII format.

RÉSUMÉ

Le Recueil de statistiques forestières canadiennes 1990 contient les statistiques les plus récentes disponibles en décembre 1990 et porte sur les ressources forestières au Canada et sur les activités d'aménagement, la production et les livraisons de marchandises, le marché des produits, les statistiques principales et les données sur l'emploi par secteur industriel ainsi que sur les indices des prix de vente, les statistiques financières et les indicateurs économiques. Quelques données sur le transport, la construction et la foresterie mondiale complètent ce document.

Cette édition combine Recueil de statistiques forestières canadiennes 1989 et Recueil de statistiques forestières canadiennes 1990.

Plus de 145 tableaux de données forestières et économiques aux niveaux national et provincial sont inclus dans ce recueil. Les données proviennent d'environ 55 publications différentes. Plusieurs figures accompagnent les tableaux afin d'aider le lecteur à visualiser les renseignements. De même, la dernière section de ce recueil décrit brièvement les principaux termes forestiers et économiques utilisés dans les tableaux. Les facteurs nécessaires à la conversion des mesures métriques en mesures impériales et les signes conventionnels employés sont disponibles à la page V. Le lecteur devra remarquer que les totaux peuvent ne pas être exacts, certains chiffres étant arrondis.

Afin d'augmenter la précision des données et en faciliter l'extraction, CANSIM (la banque informatisée de séries chronologiques de Statistique Canada) a été utilisée où cela était possible. Les données sur le marché des produits ont été extraites de bandes magnétiques produites par la Division du commerce international de Statistique Canada, et les données sur la foresterie internationale proviennent d'une bande magnétique produite par l'Organisation des Nations Unies pour l'alimentation et l'agriculture.

Cette année, la section III "Marchés des produits" et la section IV "Statistiques principales" ont été particulièrement affectées par des changements dans la méthodologie entrepris par Statistique Canada.

Les renseignements fournis au début des sections soulignent les changements survenus récemment.

Certaines dispositions peuvent être prises afin de fournir l'information sur diskette en format "Wordperfect 5.1" ou "ASCII".

CONVERSION FACTORS

All units of measure in this publication are shown in metric only. The following table shows the factors used in converting from metric measure to imperial.

Description	Metric measure	Conversion factor (multiply by)	Imperial (English) measure
Bolts	m ³	0.415 472	cord
Flooring	m ³	0.423 775	MBF (thousand board feet)
Forest area	ha (0.01 km ²)	2.470 966	acre
Logs	m ³	0.220 750	MBF (thousand board feet)
Logs, pulpwood	m ³	0.353 147	cunits (100 cubic feet)
Lumber	m ³	0.423 775	MBF (thousand board feet)
Newsprint, paper and paperboard	t	1.102 310	short ton
Newsprint, paper and paperboard	t	22.045 855	CWT (hundredweights)
Particleboard	m ³	680.272 108	sq ft 5/8 (square foot 5/8")
Plywood - softwoods	m ³	1 130.071 194	sq ft 3/8 (square foot 3/8")
- hardwoods	m ³	1 695.202 576	sq ft 1/4 (square foot 1/4")
Pulpwood - peeled	m ³	0.371 733	cord
- unpeeled	m ³	0.415 467	cord
- total	m ³	0.415 467	cord
Railway ties	m ³	26.315 789 x 0.423 775	number
Roundwood	m ³	35.314 724	cubic feet
Shingles and shakes	m ²	0.107 639	rfsq (roof squares)
Veneer - softwoods	m ³ to m ² X 314.925	3 389.830 508	sq ft (square foot)
- hardwoods	m ³ to m ² X 800.888	8 620.689 655	sq ft (square foot)
Wood chips	t	1.102 310	ton (short tons)
Wood pulp	t	22.045 855	CWTAD (hundredweights air dry)

KEY TO SYMBOLS

The standard symbols used by Statistics Canada have been adopted for use in this manual. They are as follows:

...	figures not appropriate or not applicable
..	figures not available
-	nil or zero
--	amount too small to be expressed
p	preliminary figures
r	revised figures
x	confidential to meet secrecy requirements under the Statistics Act
e	estimated
n.e.c.	not elsewhere classified

SUMMARY OF SELECTED FORESTRY STATISTICS CANADA 1990

1. Land area, 1986	921.5	million ha		
Forest land	453.3			
Inventoried forest land	397.9			
Inventoried productive forest land	243.7			
Inventoried stocked productive nonreserved forest land	216.4			
Agricultural land	67.8			
		<u>Inventoried</u>	<u>Inventoried productive</u>	<u>Inventoried stocked productive nonreserved</u>
2. Ownership of forest land, 1986	397.9	243.7	216.4	million ha
Provincial Crown	70%	80%	81%	
Federal Crown	24%	11%	10%	
Others	6%	9%	9%	
3. Volume of wood on forest land, 1986	..	23 921	23 154	million m³
	<u>1985</u>	<u>1986</u>	<u>1987</u>	<u>1988</u>
4. Silviculture				
Area harvested	901 552	1 018 732	1 012 894	1 021 619 ha
Area of site preparation	300 974	396 616	478 875	450 590
Area planted	261 020	299 518	370 245	413 291
Area directly seeded	26 189	25 954	37 318	37 726
Area of stand tending	216 592	245 531	275 487	269 309
Area of pest control	1 452 735
Trees planted (seedlings)	452 540	540 857	656 468	731 332 thousand
	<u>1986</u>	<u>1987</u>	<u>1988</u>	<u>1989</u>
5. Fire				
No. of fires	7 087	11 304	10 741	12 105
Area burned - total forest land	950 123	1 085 630	1 336 031	7 272 942 ha
- productive forest land	311 411	312 865	639 703	3 991 758 ha
Fire control - budgeted costs	\$108 811	\$115 630	\$142 329	\$165 300 thousand
- fighting costs	\$102 308	\$155 321	\$185 135	\$270 310 thousand
6. Forest insect and disease conditions, 1982-1986p	109.6	million m³		
Average annual mortality volume	62.3			
Growth reduction	22.3			
Wood destruction	25.0			
	<u>1986</u>	<u>1987</u>	<u>1988</u>	<u>1989</u>
7. Moderate to severe defoliation				
Spruce budworm	12 385	8 420	6 335	7 738 thousand ha
Forest tent caterpillar	2 007	3 813	8 350	10 715
Jack pine budworm	2 052	508	737	248

SUMMARY OF SELECTED FORESTRY STATISTICS CANADA 1990 (continued)

	<u>1983</u>	<u>1985</u>	<u>1988</u>	
8. Forest management expenditures	\$1 247.8	\$1 677.9	\$2 016.1	million

Value of exports of forest products	21%	1st	17 441	million US \$	

SECTION I

CANADIAN FOREST RESOURCES AND RELATED MANAGEMENT ACTIVITIES

Forest Biomass Inventory: The federal ENFOR program, in cooperation with Forestry Canada and provincial forestry agencies, completed the Forest Biomass Inventory to provide a better knowledge of forest biomass quantities, their form and location across Canada.

Forest Fire: The Forest Fire Statistics are reported by the provincial, territorial, and federal forest fire management agencies. Forestry Canada compiles annual statistics that primarily report the number of fires, their causes and the area of forest land that was burned.

Forest Insects and Diseases: The Forest Insect and Disease Survey (FIDS) is a nationally coordinated program of Forestry Canada's six regional FIDS units and the FIDS Technology Development Project. The program provides perspectives on insects and diseases, as well as acid rain, to forest managers, quarantine agencies, researchers, educators, and the public. In cooperation with those responsible for improving forest inventory and economic data in Canada, the survey is attempting to provide more quantitative and interpretive data on damage and depletion caused by forest pests.

Forest Inventory: Through the Canadian Forest Inventory Committee, Forestry Canada works in close cooperation with provincial and territorial forest management agencies, to make recommendations on forest inventory procedures, and to acquire data for national area and volume summaries on topics such as ownership, status, productivity, site quality, stocking, disturbance, age, forest types and species groups. The federal ENFOR program, in cooperation with Forestry Canada and provincial forestry agencies, completed the INVENTORY OF FOREST BIOMASS to provide above-ground forest biomass to the wood volume estimates. The forest inventories are available from the CANADIAN FOREST RESOURCE DATA SYSTEM.

Forest Management Expenditures: The Forest Management Expenditures Survey is a co-operative effort between the Canadian Pulp and Paper Association and Forestry Canada. It provides information on the level of funding for forest management activity by government and the forest industry in Canada. In this context, forest management includes the whole range of activities from regeneration to stand improvement, protection, research, and support services, such as forest inventory and nursery infrastructure. Resource access is also included.

Forest Tree Production: The Forest Tree Production Survey deals with the operations of federal, provincial, industrial, and private commercial production centres producing bare-root and containerized forest tree seedlings primarily for reforestation of harvested land. It is prepared with the assistance of representatives of provincial forestry agencies, the forest industry, and private sector growers across Canada.

Silviculture: Responsibility for silviculture practice in Canada is increasingly delegated to forest industry by the provincial forest management agencies. The federal role, coordinated by Forestry Canada, is supportive through silviculture research, technology transfer, and financial assistance for reforestation, stand tending, and pest control programs under specific federal-provincial agreements. Data for national summaries are collected using a questionnaire completed by provincial forestry personnel.

^aProvincial Crown land only.

^bFrom 1980-1981 to 1985-1986, an additional 39 631 ha were cleared of aspen under a special stand conversion program and were not harvested in the commercial sense.

^cOther harvesting in uneven-aged stands. Figures do not include harvesting methods, termed as regeneration conducted in largely hardwood forests. Strip cutting, seed tree cutting, shelterwood cutting and clear-cutting covered an area of 139 956 ha from 1980-1981 to 1985-1986.

^dIncludes cutovers on private land.

^eEstimated.

^fIncludes shelterwood harvesting.

^gIncludes 1 288 ha of burning and scarification.

^hIncludes 870 ha of burning and scarification and 108 ha of chemical treatment and scarification.

ⁱIncludes Other site preparation.

^jFrom 1980-1981 to 1985-1986, an additional 40 359 ha were scarified under a special stand conversion program.

^kFrom 1980-1981 to 1985-1986, an additional 41 259 ha were planted under a special stand conversion program.

^lFrom 1980-1981 to 1984-1985, an additional 1 766 ha were directly seeded under a special stand conversion program.

^mPrecommercial thinning only. Data on other treatments are not available.

ⁿThinning only.

^a Approximately 60% of the forest fires have a known-man cause, 35% are caused by lightning and 5% have an unknown cause.

^b Includes other federal lands.

^c Does not include limited protection zone, includes intensive protection zone only.

^d Includes intensive and limited zones.

^e Includes intensive and limited zones. 2 103 015 ha burned in limited zones.

^f Does not include air tankers and rapattacks.

Note: Because of differences in administrative and accounting procedures, direct comparisons between provinces and other jurisdictions are difficult and potentially misleading. The function of these data is to show the order of magnitude of forest fire control expenditures and monetary losses in Canada as well as to provide a record of the annual trend. The values are the best available, but their limitation should be recognized.

^a1977 for fiscal year 1977-1978 ... 1988 for 1988-1989.

^bResearch expenditures include only provincial and federal estimates.

^cOther expenditures in this case include the "inventory," "timber management," and "administration and other" categories of the public expenditures and the "other forestry" category of the industrial expenditure.

^d\$8.1 million, \$17.3 million, \$8.9 million, \$14.1 million, \$32.3 million, and \$24.8 million expended by Forestry Canada headquarters in Hull, Quebec, for 1979, 1981, 1982, 1983, 1985 and 1988. Expenditures for 1977 are not known.

^aCensus of manufactures monthly survey.

^bIncluding confidential figures for Ontario.

^cIncluding confidential figures for Ontario and Quebec.

^dSawmills in Nova Scotia producing less than 2 360 m³, sawmills in New Brunswick, Quebec, Ontario, and Manitoba producing less than 4 720 m³ per year, and sawmills in British Columbia producing less than 7 080 m³ per year are excluded from this survey. In Saskatchewan, only the Saskatchewan Timber Board and the few relatively large independent mills are asked to report; Alberta data are produced by Alberta. All other mills are estimated. The total shipments are free of duplication.

^eTotal shipments may not add up due to 1986 benchmark revisions for the years 1986-1988.

SECTION III

COMMODITY TRADE

Attention

Attention

Attention

As a Contracting party to the Convention on the Harmonized Commodity and Coding System (Harmonized System or HS), Canada is obliged to conform to its statistical nomenclature. The Harmonized System went into effect in Canada on January 1, 1988. It is to be adopted by all member countries of the United Nations.

Trade Statistics

Merchandise Trade Statistics are used to measure the change in the stock of material resources of the country resulting from the movement of merchandise into or out of Canada. They are reported and presented on Customs basis. Canada's international merchandise trade statistics are derived almost exclusively from administrative records of Revenue Canada, Customs and Excise and are adjusted to conform with the National Accounts concepts and definitions. Canadian trade statistics are compiled according to the "General" system of trade as defined by the United Nations Statistical Office. This system, in principle, presents all goods entering the country (imports) and all goods leaving the country (exports).

Definitions

Domestic exports: Include goods grown, extracted or manufactured in Canada, including goods of foreign origin which have been materially transformed in Canada.

Re-exports: Exports of goods of foreign origin which have not been materially transformed in Canada, including foreign goods withdrawn for export from bonded Customs warehouses.

Total exports: The sum of Domestic exports and Re-exports.

Imports: Include all goods which have crossed Canada's territorial boundary, whether for immediate consumption in Canada or stored in bonded Customs warehouses.

Valuation

Imported goods: All transportation and associated costs arising in respect of the goods being appraised prior to and at the place of direct shipment to Canada are to be added to the price of the goods. Canadian imports are valued F.O.B. (free on board), place of direct shipment to Canada. It excludes freight and insurance costs in bringing the goods to Canada from the point of direct shipment.

Exported goods: Valued or recorded at the values declared on export documents which usually reflect the transaction value, i.e. actual selling price, or in case of non-arm's length transaction, the transfer price used for company accounting purposes. Most Canadian exports to overseas countries are valued at F.O.B. port of exit including domestic freight charges to that point but net of discounts and allowances. Canadian exports to the U.S.A. are valued F.O.B. place of lading net of freight charges, discounts and allowances.

Statistical Period

The reference period is the calendar month and the calendar year.

Country of origin/destination

Exports are attributed to the country which is the last known destination of the goods at the time of export. Imports are attributed to their country of origin, that is, the country in which the goods were grown, extracted or manufactured, in accordance with the rules of origin specified by Revenue Canada, Customs and Excise. Prior to 1988, most imports were attributed to the country of export/consignment. The principal trade areas shown in this chapter are defined in section X.B "User's guide - Trade area groupings."

Province of Origin/Clearance

Prior to April 1984, export statistics were presented by province of lading, indicating the province in which the goods were last laden aboard a carrier for export. Since April 1984, for most commodities, trade data are presented by province of origin which represents the province in which the goods were grown, extracted or manufactured. Import statistics by province of clearance indicate the province in which the goods were cleared by Customs either for immediate consumption or for entry into a bonded Customs warehouse. This may not always coincide with the province in which the goods are consumed.

Coding System

The Harmonized System is an international commodity classification (six-digit) developed under the auspices of the Customs Cooperation Council. It was extended to ten digits for imports to serve as the basis for Customs tariffs and international trade statistics. For export purposes the international six digit "root" was extended to eight digits. Canada adopted this system to replace the "Customs Tariff Schedule", as well as the "Canadian International Trade Classification" (CITC) and the "Export Commodity Classification" (XCC).

The Harmonized System is based on a fundamental principle - that goods are classified by what they are and not according to their stage of fabrication, use, made in Canada status or any other such criteria.

For example, Export HS number 4407.10.31 is divided, with each 'component' named as follows:

4407.10.31

- 44 Chapter (Wood and Articles of Wood; Wood Charcoal)
- 4407 Heading (Wood sawn or chipped lengthwise, sliced or peeled, whether or not planed, sanded or finger-jointed, of a thickness exceeding 6mm)
- 4407.10 Subheading (Softwood)
- 4407.10.31 Export HS Number (Spruce, pine and fir)

On the import side, the HS number has 10 digits, where the 7th and 8th serve as the basis for Customs tariffs and the last two are for Canadian domestic purposes.

Forestry products are classified in Chapters 44, 45, 47, 48 and one item in chapter 6.

For a list of all the possible HS numbers and their accompanying description, the reader is referred to Statistics Canada Canadian Export Classification, Catalogue 12-578E.

More Information

More information concerning the "Harmonized System" is available in the manuals titled the "Customs Tariff" catalogue RV55-2/1988E (Canadian Government Publishing Centre, Ottawa, Canada K1A 0S9) and "The Canadian Export-Import Alphabetical Index" catalogue 12-579E (Statistics Canada) or by contacting the International Trade Division, Statistics Canada K1A 0T6.

In addition to the above-mentioned change, users should note that the country classification has been expanded to resemble the classification developed by the International Organization for Standardization (ISO) which has been adopted by most of the trading countries for Customs purposes.

Comparison of HS codes and XCC codes

The Harmonized System allows for more detailed information than the Export Commodity Classification System. Both sets of codes are compared on the following pages as well as the major discrepancies.

COMPARISON OF HS CODES AND XCC CODES

Forest products	Harmonized system commodity classification codes (HS) (since 1988)	Export commodity classification (XCC) (1960-1987)
A. Primary wood products		
Logs and bolts	4403.10.90, 4403.20.22, 4403.20.24, 4403.20.40, 4403.20.50, 4403.20.61, 4403.20.62, 4403.20.70, 4403.20.80, 4403.20.90, 4403.31.00, 4403.32.00, 4403.33.00, 4403.34.00, 4403.35.00, 4403.91.00, 4403.92.00, 4403.99.20, 4403.99.30, 4403.99.40, 4403.99.90.	231.12 - 231.79, 239.39.
Pulpwood	4403.20.31, 4403.20.39, 4403.99.11, 4403.99.19.	236.24 - 236.79, 238.61 - 238.69.
Wood chips	4401.21.00, 4401.22.00.	238.29.
Other primary products	0604.91.10, 4401.10.00, 4401.30.10, 4401.30.20, 4401.30.30, 4401.30.90, 4402.00.00, 4403.10.10, 4403.20.10, 4403.10.20, 4403.20.21, 4403.10.30, 4403.20.23, 4404.10.00, 4404.20.00, 4501.10.00, 4501.90.00, 4502.00.00.	234.07 - 234.99, 238.55 - 238.99, 239.09, 239.99.
B. Wood-fabricated materials		
Lumber, softwoods	4407.10.10 - 4407.10.90.	331.30 - 331.59, 331.70, 331.76.
Lumber, hardwoods	4407.21.00 - 4407.99.90.	331.04 - 331.29, 331.65, 331.79.
Veneer, softwoods	4408.10.10, 4408.10.90.	337.33 - 337.39.
Veneer, hardwoods	4408.20.00 - 4408.90.99.	337.03 - 337.19.
Plywood, softwoods	4412.19.30, 4412.19.90, 4412.91.00, 4412.99.00.	338.72 - 338.79.
Plywood, hardwoods	4412.11.00, 4412.12.10, 4412.12.90, 4412.21.00, 4412.29.00.	338.34 - 338.59.
Shingles and shakes	4418.50.10, 4418.50.20, 4418.50.30.	333.03 - 333.09.
Waferboard	4410.10.10.	-
Particleboard	4410.10.90, 4410.90.00.	-
Fibreboard ^a	4411.11.00 - 4411.99.00.	-
Other wood products	4406.10.00, 4406.90.00, 4409.10.11 - 4409.10.99, 4409.20.11 - 4409.20.90, 4405.00.00, 4413.00.00, 4414.00.00, 4415.10.00 - 4416.00.20, 4417.00.10, 4417.00.90, 4418.10.00 - 4418.40.00, 4418.90.10 - 4418.90.90, 4420.10.00 - 4420.90.90, 4421.10.00 - 4421.90.90, 4503.10.00 - 4504.90.00, 4419.00.00.	333.20 - 333.99, 335.89, 336.09 - 336.99, 338.95 - 338.99, 339.08 - 339.99, 291.79, 740.76, 941.41, 950.55, 950.66, 961.39.

COMPARISON OF HS CODES AND XCC CODES (concluded)

Forest products	Harmonized system commodity classification codes (HS) (since 1988)	Export commodity classification (XCC) (1960-1987)
C. Wood pulp and paper products		
Wood pulp, chemical ^a	4702.00.00 - 4705.00.00, 4706.92.00, 4706.93.00.	340.19 - 340.49.
Wood pulp, mechanical ^a	4701.00.00, 4706.10.00, 4706.91.00.	340.70 - 340.99.
Newsprint	4801.00.00.	351.09.
Book and writing paper	4802.40.00, 4802.60.00, 4810.21.00 - 4810.29.00.	351.15 - 351.99.
Fine paper	4802.10.00, 4802.20.00, 4802.51.00 - 4802.53.00, 4805.40.00, 4805.60.00, 4806.30.00, 4809.20.00, 4810.11.00 - 4810.12.00, 4816.20.00.	352.33 - 352.99.
Tissue and sanitary paper	4802.30.00, 4803.00.00, 4813.10.00 - 4813.90.00.	353.25 - 353.99.
Converted paper	4808.10.00 - 4808.90.00, 4809.90.00, 4811.21.00 - 4811.29.00, 4811.39.00 - 4811.90.00, 4812.00.00, 4814.10.00 - 4814.90.00.	359.20 - 359.99.
Building paper and paperboard ^a	4805.50.00, 4807.10.00, 4811.10.10.	357.19 - 357.79, 358.05 - 358.49.
Wrapping and packaging paper	4804.21.00 - 4804.41.00, 4805.30.00, 4806.10.00 - 4806.20.00, 4806.40.00.	354.10 - 354.99.
Paperboard	4804.11.00 - 4804.19.00, 4804.42.00 - 4804.59.00, 4805.10.00 - 4805.29.00, 4805.70.00 - 4805.80.00, 4807.91.00 - 4807.99.00, 4810.31.00 - 4810.99.00, 4811.31.00.	356.10 - 356.99.
Other paper products ^a	4707.10.00 - 4707.90.00, 4809.10.00, 4815.00.00, 4816.10.00, 4816.30.00 - 4816.90.00, 4817.10.00 - 4817.30.00, 4818.10.00 - 4818.90.00, 4819.10.00 - 4819.60.00, 4820.10.00 - 4820.90.00, 4821.10.00 - 4821.90.00, 4822.10.00 - 4822.90.00, 4823.11.00 - 4823.90.00.	291.30, 291.39 - 291.40, 847.20, 849.24, 850.66, 866.32, 895.20, 895.36, 901.01 - 901.99, 904.24, 904.32, 905.99, 950.37 - 950.49, 961.49.

^aSee page 64 for discrepancies between HS and XCC.

COMMODITY CLASSIFICATION

Figure 16. Commodity classification in the forest industry.

Source: Statistics Canada, International Trade Division.

DISCREPANCIES BETWEEN THE HARMONIZED SYSTEM (HS) AND THE EXPORT COMMODITY CLASSIFICATION (XCC)

The product code classification under the HS and the XCC is not strictly analogous and in some instances not comparable at all. The new HS classification offers more details and sub-groups than the old XCC. During the conversion, we maintained the product groupings to minimize the discrepancies in the time series. Some arbitrary decisions were taken under the guidance of Statistics Canada in order to avoid splits and to conform the HS to our specifications. Sub-groupings not available in the XCC were introduced in the HS.

Major changes and/or additions:

Fibreboard:	<p>HS 4411.11.00 to 4411.99.00</p> <p>Definition: "Most often manufactured from wood chips which have been mechanically defibred (defibrated) or steam exploded or from other defibred ligno-cellulosic material".</p> <p>Because of the previous lack of details in this category, most of the products under this new heading used to appear in "Building paper and board". They will now be part of "Other wood fabricated materials" under the heading "Fibreboard".</p>
Wood pulp:	<p>Includes mechanical and chemical pulp. Semi-chemical pulp was left as a component of the chemical pulp category.</p> <p>Mechanical - HS 4701.00.00 - mechanical pulp 4706.10.00 - cotton linters pulp 4706.91.00 - mechanical pulp of other fibrous cellulosic material</p> <p>Chemical:</p> <p style="padding-left: 20px;">- chemical</p> <p style="padding-left: 40px;">HS 4702.00.00 - dissolving grades 4703.00.00 - sulphate other than dissolving grades 4704.00.00 - sulphite other than dissolving grades 4706.92.00 - of other fibrous cellulosic material</p> <p style="padding-left: 20px;">- semi-chemical</p> <p style="padding-left: 40px;">HS 4705.00.00 - semi-chemical 4706.93.00 - of other fibrous cellulosic material</p>
Building paper and paperboard:	<p>Formerly "Building paper and board". The fibreboard component along with all other building materials without a paper base were removed from the definition in order to truly reflect the paper content of Chapter 48 of the HS.</p>
Other paper products:	<p>Broader definition than previously. It includes all the residual component of Chapter 48. Since the HS offers much more details, the data is now more complete. It includes all the products made out of paper and not included in other headings (handkerchiefs, serviettes, clothing accessories, etc.).</p>

III - 1. Balance of Trade by Major Commodity Group, 1988-1989

Commodity	1988			1989

^aRe-exports shown separately.

^bFarm products: Food, feed, and beverages, including live animals and tobacco.

^cIncluded with chemicals and fertilizer - minerals.

^dEnergy-minerals: coal and other crude bitumen substances, crude petroleum, natural gas, petroleum and coal products, uranium and radioactive elements and isotopes.

^eOther metals and minerals: metal ores, concentrates and scrap, iron and steel, non-ferrous metal, metal-fabricated basic products, unmanufactured asbestos, sulphur and other crude non-metallic minerals.

SECTION IV

PRINCIPAL STATISTICS

Attention

Attention

Attention

The **Census of Manufactures** is an annual survey of establishments primarily engaged in manufacturing, together with associated head offices, sales offices, and auxiliary units classified according to manufacturing industries. An establishment, usually a plant or a mill, is the smallest operating unit for which it is possible to provide a specified range of basic industrial statistics (essentially, employment data and the elements of input and output necessary to calculate value added).

In this section, 1970-1981 data have been compiled according to the **1970 version** of the Standard Industrial Classification (SIC), 1982-1987 data according to the **1980 version** and 1988 data are based on the Harmonized Commodity and Coding System (see Section III for more details) which came into effect in Canada on January 1, 1988.

Major Changes Affect 1987 and 1988 Surveys

Statistics Canada is redesigning its surveys of economic production. The Annual Survey of Manufactures is included within the ambit of this major initiative. The principal thrust of this redesign is to achieve greater consistency and comparability among the various economic surveys, which is being addressed principally by the development of a common survey frame minimizing omissions and duplications.

The objectives are to ensure that adequate attention is paid to larger establishments who are responsible for the major share of manufacturing activity and to decrease the burden on small companies by the use of short, simple questionnaires, by the use of sampling and the use of administrative records.

The design specifications of the new survey frame were implemented for the 1987 Annual Survey of Manufactures. This meant that not only were fewer long form questionnaires used for the 1987 survey than had been the norm for previous years, but the change in long form coverage for individual province-by-industry cells was often significant. The data yielded by long forms is much more complete than from other sources; thus the change in the mix of questionnaire types resulted in a one time break in the 1987 data when compared with previous years.

Principal Considerations: Logging Industry

The principal statistics for logging are on a comparable basis for 1987 and 1988. However, there is a break between the revised 1987 levels and the data previously published for 1986, due to a significant change in the methodology.

Traditionally, Statistics Canada was alerted to the existence of a new business when application was made to Revenue Canada for a payroll deduction (PD) account number. The issuance of a PD number resulted in the business being added to Statistics Canada's list and ultimately being surveyed by them.

This process was known to contain certain conceptual flaws. One of them, the existence of establishments with no employees, has a direct bearing on the logging industry.

Under the new methodology, the information is drawn from Revenue Canada's records. This information (some of it based on sampling), coupled with survey results for large establishments serves as the basis for the industry estimates. Revenue Canada's data are more complete and significantly reduce response burden. As a direct result to the improved ability to obtain data for small, unincorporated businesses, the number of establishments and the employment data changed considerably. Since the improvement came at the small end of the scale, there was less of an impact on shipments and costs.

The Wood Industries and the Paper and Allied Industries were not affected by these changes.

Data Availability 1987-1988

Reduction in the resources made available for processing the 1987 survey meant that only selected variables on the returned questionnaires were edited and published.

The more comprehensive array of principal statistics reappeared with the 1988 data.

Detailed definitions of all industries covered by this section can be found in the publication "Standard Industrial Classification, 1980," Catalogue 12-501.

The headings used in the principal statistics tables are briefly described in section X.A, "User's guide - Definition of terms." For detailed definitions and some qualifications to the preceding explanations, see "Concepts and Definitions of the Census of Manufactures," Catalogue 31-528.

SECTION V

EMPLOYMENT

Labour Force Survey

Labour Force Survey statistics are based on information obtained through a sample survey of households. Interviews are carried out in about 48 000 representative households across the country.

The sample used in the surveys of the labour force has been designed to represent all persons in the population 15 years of age and over residing in Canada, with the exception of the following: residents of the Yukon and Northwest Territories, persons living on Indian reserves, inmates of institutions, and full-time members of the armed forces.

A comprehensive description of the design of the Labour Force Surveys and a complete list of Self-Representative Units, can be found in "Methodology of the Canadian Labour Force Survey," Statistics Canada, Catalogue 71-526, Ottawa, 1976.

Employment: Employed persons are those who, during the reference week: a) did any work at all; b) had a job, but were not at work due to own illness or disability, personal or family responsibilities, bad weather, labour dispute, vacation, or other reasons (excluding persons on layoff and those with a job to start at a definite date in the future).

Census of Manufactures

The Census of Manufactures is an annual survey of the manufacturing industries of Canada.

Data are accepted for any fiscal year ending not earlier than April 1 of the reference year, nor later than March 31 of the following year. However, data of small establishments based on financial statements submitted to Revenue Canada relate to the taxation year, that is, any reporting year ending in the calendar year. These practices should be kept in mind in comparing census data with those compiled on a calendar year basis.

For detailed definitions and some qualifications to the preceding explanations, see Concepts and Definitions of the Census of Manufactures, Catalogue 31-528.

Employment: Excludes working owners and partners of unincorporated businesses, which are separately tabulated, and outside pieceworkers. Respondents are asked for average number employed during the year. Production and related workers in manufacturing activity include those at the establishment engaged in processing, assembling, storing, inspecting, handling, packing, maintenance, repair, janitorial and security services, and working foremen. Administrative office and other non-manufacturing employees include all functions at head offices, sales offices, and auxiliary units as well as cafeteria workers, research personnel, truck drivers, etc.

SECTION VI

SELLING PRICE INDEXES AND ANNUAL AVERAGE PRICES

The Industrial Product Price Indexes measure price changes for major commodities sold by Canadian manufacturers. Elemental indexes are calculated for 1314 Principal Commodity Group outputs as defined in the 1981 Input/Output (I/O) table. Weights used to aggregate commodity indexes are taken from the output or "Make" matrix of the I/O system which provides an integrated set of commodity values for all manufacturing industries.

About 10 000 prices are collected monthly from about 3 000 producers for goods sold which are valued at the boundary of the establishment, so that the cost of taxes collected at that point and transportation provided by public carriers beyond that point are excluded. Prices are reported in great detail for some transactions, enabling both the goods and the terms of sale to be identified. Such collections are instituted for important commodities. The sample size is increased where price movement has a regional aspect or where there are large flows of goods to export markets.

Sampling for the direct survey of an elemental indicator is usually done by a formal probability sampling procedure, wherein important producers are "must take" respondents and a random selection is made of the smaller producers. Such samples are redesigned according to a regular cycle as dictated by changes in the market. A given elemental indicator is usually supported by 12 to 15 price quotes, although some are derived from as few as 8 quotes or as many as 30 quotes.

The 1981 = 100 industry aggregation of elemental commodities can be directly related to the 1971 = 100 Industry Selling Price Indexes which are available from 1956 to 1987. Link factors, derived from the relationship of the two series in December 1985, were published in the January issue of Catalogue 62-011.

In 1988, the time series related to forest products have been modified to accommodate actual needs. The new time series are only available as of 1981.

SECTION VII

FINANCIAL STATISTICS AND ECONOMIC INDICATORS

- Capital and repair expenditures
- Contribution to Canadian Gross Domestic Product
- Corporate profits and profitability
- Economic indicators
- Income taxes

Gross Domestic Product

Since 1986, the gross domestic product (GDP) has replaced the gross national product (GNP) in table VII-6 as a measure of the Canadian collective income. This change is in accordance with the System of National Accounts of Statistics Canada and with the international practice recommended by the United Nations.

According to Statistics Canada, the GDP allows for a better analysis of the economic performance of the country as it measures the production originating in the country, whereas the GNP is adjusted for the flow of interests and incomes crossing the national border.

In tables VII-6, VII-7, VII-8 and VII-9, you will notice that the national GDP is shown to be greater than the sum of the provincial GDPs. This is mainly because the domestic territory of the country is defined to include embassies and military bases on foreign soil. Thus there is Canadian domestic production that does not occur within the geographic boundaries of any province or territory.

Statistics Canada's change of approach results in an upward revision of the aggregate estimations. New surveys and information sources have allowed re-examination of the data from 1961 until 1985. The major sources of change are: day care fees, unrecorded income in construction, indirect taxes and investment income of municipalities, and residential repairs.

More details are available from Statistics Canada, catalogue 13-001, first quarter 1986, and catalogue 13-213.

SECTION IX

WORLD FORESTRY

The world forestry figures were retrieved from the "1988 Yearbook of Forest Products." Publication of the Yearbook is made possible by the cooperation of various governments, which supplied most of the information in the form of replies to questionnaires. The Forestry Department of the Food and Agriculture Organization of the United Nations in collaboration with the Economic Commission for Europe compiled the results.

The products are classified using the "United Nations Standard International Trade Classification (SITC) Revision 2."

SECTION X

USER'S GUIDE

- Definitions of terms
- Trade area groupings
- Reference notes

X. USER'S GUIDE

A . Definitions of terms

Age class: Any interval into which the age range of trees, forests, stands, or forest types is divided for classification and use. Also the tree, forest, stand, or forest type falling into such an interval.

Balance of trade: The difference between the dollar, or money value, of a country's exports and imports of merchandise or of goods and services. If a country exports more than it imports, it has a trade surplus; if it imports more than it exports, it has a trade deficit. The balance of trade is an important part of a country's overall balance of payments.

Cansim (Canadian Socio-Economic Information Management System): A fully computerized data bank of Statistics Canada's current and historical information from its most widely used series of statistics.

Clear-cut: An area of forest land from which all merchantable trees have recently been harvested.

Constant dollar: Represents the value of expenditure or production measured in terms of some fixed base period's prices. (Changes in constant dollar expenditure or production can only be brought about by changes in the physical quantities of goods purchased or produced.)

Consumer price index: Measures the rate of change in a typical basket of consumer goods and services, including housing, food, and health care. It can be broken down into food and nonfood items, goods and services, and other components.

Domestic exports: Include goods grown, extracted or manufactured in Canada, including goods of foreign origin which have been materially transformed in Canada.

Employment, census of manufactures: Excludes working owners and partners of unincorporated businesses, which are separately tabulated, and outside pieceworkers. Respondents are asked for average number employed during the year. Production and related workers in manufacturing activity include those employees at the establishment engaged in processing, assembling, storing, inspecting, handling, and packing products and in maintenance, repair, janitorial, and security services; and working foremen. (Outside pieceworkers' remuneration is included in cost of materials). Administrative office and other non-manufacturing employees include all functions at head offices, sale offices and auxiliary units as well as cafeteria workers, research personnel, truck drivers, etc.

Employment, labour force survey: Persons who, during the reference period: a) did any work at all, for pay or profit in the context of an employer-employee relationship, or were self-employed (including unpaid family work, which is defined as work contributing directly to the operation of a family farm, business, or professional practice owned or operated by a related member of the household); or b) had a job but were not at work due to own illness or disability, personal or family responsibilities, bad weather, labour dispute, or other reasons (excluding persons on layoff and those with a job to start at a future date).

Establishment: The smallest unit capable of reporting certain specified input and output data; usually a plant or mill. Numbers for 1975 declined owing to the exclusion of existing establishments deemed to have no paid employees. Principal statistics of an establishment active in more than one municipality are prorated to "quasi-establishment" locations, which are treated as establishments in compilations.

Even-aged: Of a forest, stand or forest type in which relatively small age differences exist between individual trees. (The maximum difference in age permitted is usually 10 to 20 years; if the stand will not be harvested until it is 100 to 200 years old, larger differences up to 25% of the rotation age may be allowed.)

Forest biomass (as reported in section I, table I-1): It is the mass of the above-ground portion of live trees; it is expressed as oven-dry tonnes; it includes small-diameter trees and it excludes dead trees and branches, roots, and nonwoody vegetation.

Forest land: Land primarily intended for growing, or currently supporting, forest. Includes land not now forested, e.g. clear-cut lands; northern lands that are forested but not intended for any use; and plantations.

Fuel and electricity (cost of): Consumption of purchased fuel and electricity only, at laid-down cost including transportation and handling charges, duties, etc. Applies to large establishments only. Data for nonmanufacturing activity are included under manufacturing activity except where an ancillary office uses a separate "head office" report. In this latter case, the fuel reported is included under cost of materials for "Total Activity" only.

Gross merchantable volume of wood: Volume of the main stem, excluding stump and top but including defective and decayed wood, of trees or stands of trees.

Growing stock: The sum (by number, basal area, or volume) of trees in a forest or a specified part of it.

Hardwood(s): Trees belonging to the botanical group Angiospermae with broad leaves usually all shed annually. Also, stands of such trees and the wood produced by them.

Immature: In even-aged management, those trees or stands that have grown past the regeneration stage but are not yet mature.

Implicit price index: The most comprehensive of all the indicators available in Canada for measuring price change, because it covers the entire range of goods and services produced and sold in the economy. It is, therefore, used as a measure of price change taking place in the economy as a whole. Moreover, implicit price indexes are available for each of the main expenditure components of Gross National Product. Therefore, this set of indicators can be used to trace and identify pressure points among the principal areas of demand as they are seen to be associated with inflationary developments in the economy.

Imports: Include all goods which have crossed Canada's territorial boundary, whether for immediate consumption in Canada or stored in bonded Customs warehouses.

Indirect taxes: Taxes that represent a business cost or that are incorporated into prices at the retail level are taken here as indirect. They constitute, in effect, taxes on expenditures.

Lumber: The product of saw and planing mills that is not further manufactured beyond sawing, resawing, passing lengthwise through a standard planing machine, crosscutting to length, and matching.

Materials and supplies (cost of): Generally, consumption of purchased items only at laid-down cost including transportation and handling charges, duties, etc. Includes transfers between units of the same company and work done on contract by others. At the manufacturing activity level, this item represents purchased items used in manufacturing operations.

Mature: In even-aged management, those trees or stands that are sufficiently developed to be harvestable and that are at or near rotation age (includes overmature trees and stands if an overmature class has not been recognized).

Mechanical wood pulp: The production of fibers and fiber bundles by grinding wood with pulpstones or by mechanical refiners as opposed to chemical methods.

Nonreserved (land): Forest land that, by law or policy, is available for the harvesting of forest crops.

Overmature: In even-aged management, those trees or stands past the mature stage.

Paper: Generally, a matted or felted sheet of vegetable fiber, formed on a screen from a water suspension, used for writing and printing as well as for wrapping and many other purposes. Paper is one of two broad subdivisions of the general term "paper"; the other is paperboard.

Paperboard: A general term describing sheets made of fibrous material 0.012 in. (0.3 mm) or more in thickness. Compared with paper, paperboard is heavier per unit area, thicker, and more rigid. Paperboard is the term used to describe any single variety, or group of varieties, of board materials used in the production of boxes, folding cartons, and solid fiber and corrugated shipping containers.

Particleboard: A generic term for a panel manufactured from lignocellulosic materials - commonly wood - essentially in the form of particles (as distinct from fibers). These materials are bonded together with synthetic resin or other suitable binder, under heat and pressure, by a process wherein the interparticle bonds are created wholly by the added binder.

Plywood: A composite panel or board made up of cross-banded layers or plies, bonded with an adhesive, of veneer only, or veneer in combination with a core of lumber, or of particleboard. Generally the grain of one or more plies is roughly at right angles to that of the other plies. An odd number of plies is almost always used.

Production and related workers: See Employment, Census of Manufactures.

Productive (land): Forest land that is capable of producing a merchantable stand within a reasonable length of time.

Re-exports: Exports of goods of foreign origin which have not been materially transformed in Canada, including foreign goods withdrawn for export from bonded Customs warehouses.

Reforestation: The process of rebuilding a forest after it has been logged, or after a fire or other natural processes such as disease kill the timber. Reforestation is accomplished through a variety of methods, including the planting of seedlings, the sowing of seed, or natural regeneration from "seed trees." (Before replanting, the ground usually is cleared of most of the debris, and efforts are made to limit the growth of brush and grasses that would compete with the seedlings for water and light.

Regeneration: The renewal of a forest crop by natural or artificial means. Also, the new crop so obtained. The new crop is generally less than one metre in height.

Reserved (land): Forest land that, by law or policy, is not available for the harvesting of forest crops.

Roundwood: Sections of tree stems, with or without bark. Includes logs, bolts, posts, pilings and other products still "in the round."

Salaries and wages: These are compiled before deductions for income tax and employee-paid portions of both employee benefits and social insurance. They include payments for regular work, overtime, and paid leave as well as bonuses, commissions paid to regular employees, severance pay, etc. Withdrawals of working owners and partners of unincorporated businesses are excluded.

Seedling: A young tree having a diameter at breast height equal to or less than 1 cm. Includes trees with a height less than 1.30 m.

Selling price index: An index that shows changes in the overall inflation rate or the rate of price change for a particular sector of the economy, with the base year equal to 100.

Semichemical pulp: Pulp obtained by mild treatment of wood chips by any of the chemical pulping processes, which remove only part of the lignin from the wood chips, followed by mechanical treatment to complete the separation of individual cellulose fibers.

Shakes: In construction, a type of shingle usually hand split from a bolt and used for roofing or weatherboarding.

Shingles: Thin, rectangular pieces of wood, sawn along the grain and tapering in thickness, used like tiles for roofing and weatherboarding.

Silviculture: The theory and practice of controlling the establishment, composition, care, and development of stands of trees to achieve the objectives of management.

Softwood(s): Cone-bearing trees with needle - or scale - like leaves belonging to the botanical group Gymnospermae. Also, stands of such trees and the wood produced by them.

Stocked forest land: Land supporting tree growth. In this context, tree growth includes seedlings and saplings.

Subsidies: Direct or indirect payments or other assistance to someone to produce goods or services - to benefit the consumer from lower prices, to protect producers against a decline in the price of their products, to encourage certain types of economic production, or to promote certain types of socially desirable activity.

Sulphate (kraft) pulp: A chemical wood pulp obtained by cooking wood chips at high temperature in a solution of sodium hydroxide and sodium sulfide.

Sulphite pulp: A chemical wood pulp obtained by cooking wood chips in a bisulfite-sulfurous acid solution.

Total exports: The sum of Domestic exports and Re-exports.

Uneven-aged: Of a forest, stand, or forest type in which intermingling trees differ markedly in age. (The minimum difference in age permitted in an uneven-aged stand is usually 10 to 20 years).

Unproductive: Forest land that is incapable of producing a merchantable stand within a reasonable length of time. Includes muskeg, rock, barrens, marshes, meadows, etc., within a forest land area.

Value added, manufacturing activity: Value of shipments of goods of own manufacture plus net change in inventory of goods in process and finished goods, less cost of materials and supplies used, fuel, and electricity.

Valued added, total activity: Consists of value added, manufacturing activity and value added, nonmanufacturing activity. The latter is calculated by subtracting relevant commodity inputs from nonmanufacturing revenue or output; these commodity inputs are net of the change in inventories of goods purchased for resale. Nonmanufacturing revenues include depreciable fixed assets produced by own work force for own use, revenue from product rentals, etc., but exclude nonoperating revenue such as real property rentals, dividends, and interest.

Value of shipments of goods of own manufacture: Net selling value of goods made by reporting establishment, or for its account, from its own materials. Excludes discounts, returns, allowances, sales tax, excise taxes and duties, returnable containers, and common or contract carriers' charges for outward transportation (but not own carriers' delivery expense). Includes repair and custom revenue, transfer to reporting units of same firm, all exports, and book value of own products shipped the first time on a rental basis. Includes consignment shipments to other countries, but domestic consignment shipments are included in inventory units sold.

Veneer: A thin layer or sheet of wood.

Waferboard: A type of particleboard composed of wafers cut from roundwood bolts (mostly poplar) of uniform length and thickness resembling small pieces of veneer. The wafers are bonded together with resin binder, under heat and pressure, by a process similar to that by which particleboard is made.

Working owners and partners: Include only those active in unincorporated businesses.

B. Trade area groupings

This is a selection of trade area groupings used in this publication.

Countries are arranged primarily according to geographical location. The country classification employed does not reflect the views or intentions of the Government of Canada on international issues of recognition, sovereignty, or jurisdiction. The trade areas shown in section III (Statistics Canada) and section IX (FAO) include groupings that are defined as follows:

Central America^a: Anguilla, Antigua and Barbuda, Bahamas, Barbados, Belize, Bermuda^b, British Virgin Islands^b, Cayman Islands^b, Costa Rica, Cuba, Dominica, Dominican Republic, El Salvador, Grenada^b, Guadeloupe, Guatemala, Haiti, Honduras, Jamaica, Martinique, Mexico, Montserrat^b, Netherlands Antilles, Nicaragua, Panama, Puerto Rico, Saint Lucia^b, St. Kitts-Nevis^b, St. Vincent and the Grenadines^b, Trinidad and Tobago, Turks and Caicos Islands^b, and United States Virgin Islands^b.

China, People's Republic: China and Mongolian People's Republic.

Eastern Europe^a: Albania, Bulgaria, Czechoslovakia, Germany (East), Hungary, Poland, and Romania.

European Economic Community (EEC): Belgium-Luxembourg, Denmark, France, Germany (Federal Republic), Greece^c, Ireland, Italy, Netherlands, Portugal^c, Spain^c, and United Kingdom.

Middle East - African part: Egypt, Ethiopia, Libyan Arab Jamahiriya, Somalia, and Sudan.

Middle East - Asian part: Bahrain, Cyprus, Emirates (United Arab), Iran (Islamic Republic), Iraq, Israel, Jordan, Kuwait, Lebanon, Oman, Qatar, Saudi Arabia, Syrian Arab Republic, Turkey, Yemen South, and Yemen North.

Other Africa: Algeria, Angola, Benin, Botswana, British Indian Ocean Territory^b, Burkina Faso^b, Burundi, Cameroon, Cape Verde, Central African Republic^b, Chad, Comoros, Congo, Côte-d'Ivoire, Djibouti, Equatorial Guinea, French Southern and Antarctic Territories^b, Gabon, Gambia, Ghana, Guinea, Guinea-Bissau, Kenya, Lesotho, Liberia, Madagascar, Malawi, Mali, Mauritania, Mauritius, Morocco, Mozambique, Namibia^b, Niger, Nigeria, Reunion, Rwanda, St. Helena^b, Sao Tome and Principe, Senegal, Seychelles^b, Sierra Leone, South Africa, Swaziland, Tanzania (United Republic), Togo, Tunisia, Uganda, Western Sahara^b, Zaire, Zambia, and Zimbabwe.

Other Oceania: American Samoa^b, Cook Islands^b, Fiji, French Polynesia, Guam^b, Kiribati^b, New Caledonia, Niue^b, Papua New Guinea, Pitcairn Island^b, Solomon Islands, Tonga, Tokelau^b, United States Minor Outlying Islands^b, Vanuatu, Wallis and Futuna Islands^b, and Western Samoa^b.

Other Western Europe: Austria, Gibraltar, Iceland, Malta, Switzerland, and Yugoslavia^a.

South America: Argentina, Bolivia, Brazil, Chile, Colombia, Ecuador, Falkland Islands^b (Malvinas), French Guiana, Guyana, Paraguay, Peru, Surinam, Uruguay, and Venezuela.

South East Asia: Brunei Darussalam, Indonesia, Malaysia, Philippines, Singapore, and Thailand.

^aTo facilitate the comparison with certain studies published by the FAO, Mexico is assigned to Central America instead of North America, Yugoslavia is assigned to Western Europe instead of Eastern Europe, and the USSR is shown outside Europe instead of in Eastern Europe as coded in Statistics Canada publications.

^bCountry names coded only in Statistics Canada publications.

^cGreece joined the EEC on January 1, 1981, and Portugal and Spain on January 1, 1986.

C. Reference notes

Shipments of roundwood in British Columbia

Beginning in 1980, the operations of "log supply divisions" in the British Columbia coastal region are treated as merchandising activity rather than logging activity. This change has been implemented to eliminate sizeable duplications in logging inputs and shipments. Involved are four establishments (in some of the earlier years there were five establishments). The "log supply divisions" are administrative units that control the distribution of roundwood and wood chips, from each firms' own logging establishments plus outside purchases and some contractor production, to their wood-using mills. Under the procedure used prior to 1980 the shipments by logging establishments to log supply establishments were duplicated by the shipments from the "log supply divisions" to the wood-using mills although in effect they were only book transfers. The revised figures for 1970-1979 eliminate this duplication.

Discrepancies between production and shipments of roundwood figures

Several reasons can be given to explain the inconsistency between production and shipments figures:

1. Inventories fluctuations.
2. Measurement methods vary from province to province. Some firms use methods recommended by provincial governments, but these methods do not always conform to Statistics Canada requirements. Therefore, Statistics Canada must develop its own conversion factors so that it can use the data for analyses and comparisons.
3. Production data are estimates of all logging operations (we arrived at these estimates using information obtained from the provinces and from Statistics Canada), while shipments comprise only quantities declared by firms whose primary activity is logging. Shipments made by small businesses, whose operations are reported in terms of dollar values, and those made by firms to their subsidiaries as part of a vertical integration, are not taken into account. Each of these factors is responsible for lowering the figures by approximately 10 to 15%.
4. Some small businesses have such low production that they are not included in Statistics Canada surveys.
