## ABSTRACT

Expenditures in forest management activities are reported by governments and the forest industry for the years 1977, 1979, 1981 and 1983. Total expenditures by all agencies, on a national basis, increased from \$660 million in 1977 to \$1,248 million in 1983, an increase of 89%. However, most of the increase is inflationary; in real terms, total expenditures increased by 3.54% over the period, or at a real compound rate of .55% per year. This low rate is attributable to the recession of 1981-82 which resulted in substantial reductions in real growth between 1981 and 1983 in forest access and administration costs. There was also a significant drop in protection expenditures between those two reporting years. At the same time however, expenditures on silviculture in Canada increased from \$118 million in 1977, to \$336 million in 1983, an increase in real terms of 55% over the period, or 7.58% per year.

## RESUME

On trouvera dans ce rapport les sommes d'argent engagées en aménagement forestier par les gouvernements et l'industrie forestière pour les années 1977, 1979, 1981 et 1983. Les gouvernements fédérale et provinciaux ainsi que l'industrie forestière, ont dépensé en aménagement forestier une somme globale de 660\$ millions en 1977 par rapport à 1,248\$ millions en 1983, ce qui représente une augmentation de 89%. Cependant, la majeure partie de cette augmentation est inflationniste. Les dépenses totales n'ont en réalité augmenté que de 3,54% durant cette période, soit un taux d'augmentation réel composé de 0,55% par an. Ce faible pourcentage est dû à la récession de 1981-82. La récession engendra une réduction significative du taux de croissances des dépenses pour les routes d'accès et l'administration en plus d'une baisse importante des dépenses pour la protection des forêts. Durant cette même période, les dépenses en sylviculture au Canada sont passé de 168\$ millions en 1977 à 336\$ millions en 1983, une augmentation réelle de 55% pour cette période ou l'équivalent de 7,58% par année.

## ACKNOWLEDGEMENTS

This report of forest management expenditures in Canada was a cooperative effort between the Canadian Pulp and Paper Association and the Canadian Forestry Service. Both agencies would like to extend their thanks to all provincial forest management agencies and member companies of the Canadian Pulp and Paper Association for their cooperation in providing the expenditure data required for this study.

## INTRODUCTION

This report, a cooperative effort between the Canadian Pulp and Paper Association (CPPA) and the Canadian Forestry Service (CFS), is the fourth in a series of reports providing information pertaining to the level of funding for forest management activity by government and the forest industry in Canada. The first two previous reports were prepared by Reed and Associates Ltd. (1978, 1980), the third report was a joint report by the CFS and CPPA. The present report follows essentially the same format as that introduced in the first three, and summarizes the expenditures for the period 1977-1983.

The objective of this report is to summarize expenditures for selected categories of forest management in Canada on a provincial basis by provincial governments, the federal government and the forest industry for the period 1977-1983. Data from the new survey are analyzed and comparisons made with the last reported period (1981). Expenditures from earlier reporting period (1977 & 1979) are presented for reference purposes.

Forest management, for the purposes of this report, includes the whole range of activities from regeneration through to stand improvement, protection, research and support services, such as forest inventory and nursery infrastructure. Access roads are also included.

Data for this report were obtained from the provincial agencies responsible for forest management, the federal government, and member companies of the Canadian Pulp and Paper Association, and are reported on a provincial basis.

The section on public expenditures on forest management deals with expenditures by provincial governments and the federal government for the two fiscal years surveyed 1982/83 and 1983/84. For purposes of analysis, these two years are compared with 1981/82.

The section on industry expenditures covers the calendar year surveyed 1983. These data are compared with the last reported period 1981.

The summary of government and industry expenditures covers the years 1977, 1979, 1981 and 1983. For convenience and ease of comparison, fiscal-year data are reported on a calendar-year basis. For example, government expenditures for fiscal year 1977/78 are reported as 1977 calendar-year data in the final section.

The appendices provide data on expenditures on forest management by source and activity for each province for the fiscal years 1979/80, 1980/81, 1981/82, 1982/83 and 1983/84 for government, and for 1977, 1979, 1981 and 1983 for the forest industry.

## PUBLIC EXPENDITURES ON FOREST MANAGEMENT

### Introduction

Ninety percent, or 3.1 million km<sup>2</sup>, of Canada's forest land is classified as provincial crown land. The primary responsibility for forest management on these lands rests with the provinces. The remaining 10 percent, or .3 million km<sup>2</sup>, is under federal, private, and municipal ownership. Because of the provincial responsibility for the management of provincial crown lands, and the role of the federal government in forest research and development and the funding of forest management activities through federal-provincial agreements and other mechanisms, this section of the report sets out the level of expenditures by both governments on selected forest management activities.

### Scope and Method

For purposes of reporting, public expenditures on forest management include the following seven broad categories of activity: silviculture, protection, resource access, forest inventory, research, timber management, and administration. Each provincial forestry agency contacted for information was requested to provide a breakdown of its forest management expenditures according to this format. For its silviculture and protection expenditures, further detail was requested. Expenditure data for silviculture was to be broken into the following selected components: regeneration, tending, site preparation, marking, and silvicultural support; expenditures on protection allocated to fire and pests. Of the ten provinces contacted, seven were able to provide the additional information requested (Appendix 2).

Expenditures made under federal-provincial forest resource development agreements were assigned to the appropriate management activity and, in the case of silviculture and protection, detailed according to the components described above.

The selection of management categories follows that used by Reed, et al. (1978) and subsequently by the authors in their previous reporting of management expenditures (Smyth, et al. 1984). The categories were retained for this report since they tend to accommodate, in the majority of cases, the different accounting procedures followed by the provinces, and provides some degree of continuity in examining expenditures over a period of time. A detailed breakdown of the various reporting elements within each management activity is found in Appendix 1.

The analysis of public forestry expenditures is based on information solicited from each provincial agency responsible for forest management, the Canadian Forestry Service of the Ministry of State (Forestry), the Department of Indian and Northern Affairs, and the Department of Regional Industrial Expansion.

Both published and unpublished data were used. In several provinces, agencies responsible for forest management also administer parks, wildlife, fisheries, tourism, mines, etc. Additionally, expenditures on forest management activities are not classified the same way in each jurisdiction and, therefore, some adjustments had to be made. Each provincial agency, when preparing data for this study, attempted to account for these problem areas and report the best information possible.

The expenditure data collected for this report cover the fiscal years 1982/83, and 1983/84. Tables detailing these expenditures for each province and the territories are found in Appendix 2. Tables 1 and 2 contain expenditure data for the five years 1977/78, 1979/80, 1981/82, 1982/83 and 1983/84. For purposes of analysis, however, 1981/82 is the base year to which expenditures made in 1982/83 and 1983/84 are compared. Appendix 2, in addition, provides public forest management expenditures for the fiscal years 1979/80, 1981/82.

#### Distribution of Public Expenditures by Province

Table 1 provides provincial and federal expenditures on forest management activities for 1977/78, 1979/80, 1981/82, 1982/83, and 1983/84.

For Canada as a nation, expenditures totalled approximately \$970.8 million in 1982/83, dropping marginally to \$967.5 million in 1983/84. The decrease in fiscal 1983/84 over 1982/83 is partially the result of less money expended on activities such as protection, as indicated in Tables 6 and 7. For the three years compared here, provincial expenditures as a proportion of total dollars spent ranged from 81% to 85%.

As expected, the greater share of provincial monies for forest management continued to be expended by the provinces of British Columbia, Alberta, Ontario, and Québec. Of total provincial expenditures, these four provinces accounted for 87%, 90%, and 90% in each of the three years, respectively.

Federal funds spent on forest management increased significantly (29%) from \$142.7 million in 1981/82 to \$183.6 million in 1983/84. The greater percentage of these funds were disbursed through federal-provincial forest resource development agreements and the regional forestry centres and national institutes of the Canadian Forestry Service. Approximately 60% of the total funds expended in each of the three years were spent in the provinces of New Brunswick, Québec, and Ontario. Total expenditures shown for Québec include administration expenditures of Canadian Forestry Service headquarters located in Hull, Québec. All forest management activity conducted in the Yukon Territory and Northwest Territories is funded by the federal government.

Table 1. Public expenditures on forest management for 1977/78, 1979/80, 1981/82, 1982/83, and 1983/84 by province.

c Totals may not add due to rounding.

d \$8.1 million, \$17.3 million, \$8.9 million, \$14.1 million expended by Canadian Forestry Service Headquarters in Hull, Quebec, for each of the four respective years. Expenditures for 1977/78 are not known.

### Distribution of Public Expenditures by Activity

Table 2 provides a national summary of public expenditures by the previously defined activities for the five fiscal years 1977/78, 1979/80, 1981/82, 1982/83, and 1983/84.

For Canada, expenditures on silviculture during the survey period amounted to \$229.3 million in 1981/82, increasing to \$274.0 million and \$299.3 million in 1982/83, and 1983/84, respectively. This was an increase, in current dollars, of 31% over the three year period. The sharp decrease in total provincial protection expenditures from \$240.2 million in 1982/83 to \$182.1 million in 1983/84 is primarily due to a relaxed fire season in Alberta in 1983 as compared to 1982 and a \$22.8 million reduction in protection costs in British Columbia. Monies expended on resource access decreased by \$10 million to \$92.5 million in 1982/83 over the previous year but increased to \$107.8 million in 1983/84. Ninety-three percent of total public expenditures on road access in 1983/84 were in Québec, Ontario, and British Columbia. Nationally, funding for forest inventory decreased marginally during the three year period from \$22.6 million in 1981/82 to \$22.0 million in 1983/84. Combined federal and provincial expenditures during the period increased (although marginally) in the provinces of Newfoundland, Nova Scotia and New Brunswick. In the remaining provinces, except Ontario, expenditures fluctuated; those of Ontario declined from \$3.7 million in 1981/82 to \$2.0 million in 1983/84. Research expenditures increased by 37% from \$56.4 million 1981/82 to \$77.2 million 1983/84. In each year, the federal government expended the greater share of funding on this activity. Monies expended on timber management (operational cruising, data collection, planning, etc.) increased 8% from \$74.7 million in 1981/82 to \$80.9 million in 1982/83 and declined to \$77.9 million in 1983/84. The administration category, which is mainly overhead and support service for forest management activities, averaged approximately 18% of total dollars disbursed in each of the three years.

### Distribution of Public Expenditures by Province and Activity

Tables 3, 4, 5, 6 and 7 provide summary information of public expenditures by province and activity for 1977/78, 1979/80, 1981/82, 1982/83, and 1983/84, respectively.

Silviculture for purposes of reporting consists mainly of the following activities: regeneration, site preparation, tending, marking, silvicultural support, etc. The greater percentage of silvicultural funding in all provinces was disbursed almost entirely on regeneration, related site preparation, and silvicultural support operations. Expenditures on each of the other silvicultural components remained minor. Extension forestry and assistance to the small private woodlot owner under various provincial programs are included in these estimates. Nationally, expenditures increased by 31%, or \$70.0 million from \$229.3

Table 2. Distribution of public expenditures on forest management for 1977/78, 1979/80, 1981/82, 1982/83 and 1983/84 by activity.

in 1981/82 (Table 5) to \$299.3 million in 1983/84 (Table 7). Despite the recessionary period of late 1981 through early 1983, there were increases in silvicultural expenditures in most provinces, notably Newfoundland, Nova Scotia, and Québec. Expenditures by these provinces in 1983/84 were up by at least half over what they were in 1981/82. Other significant increases were in Alberta and British Columbia.

The objective of the forest protection program in each of the provinces is to protect the forest from damage by wildfire and pests, especially insects and diseases. Expenditure on this activity tend to vary from year to year and from province to province, depending on the incidence of fire and pest problems. For the period of 1981/82 to 1983/84, protection costs consisted mainly of fire suppression in all provinces except New Brunswick and Manitoba, where insect problems were of primary concern. Expenditures for protection in the Yukon Territory and Northwest Territories were for fire suppression.

Expenditures for road access include expenditures on permanent roads, bridges, and other supporting infrastructure, as well as stumpage offsets in British Columbia. Most roads constructed by the provinces are multi-purpose and may be of a higher standard than would normally be required for harvesting, silviculture or protection purposes. Only two provinces, Newfoundland and Ontario, increased expenditures over the three year period. Saskatchewan and Alberta did not spend any monies on road systems in 1982/83 or 1983/84 while Quebec and British Columbia reduced their expenditures by a significant amount. Under federal-provincial forestry agreements, the federal government contributed approximately 20% of the funding for road programs during the three year period.

Expenditures on forest inventory vary considerably from year to year in each province, reflecting to some degree the priority each province puts on inventory analysis and interpretation, as well as the amount of field work necessary to keep inventories up to date. Over the three year period 1981/82 to 1983/84, expenditures on forest inventory averaged approximately \$22.0 million annually, or 2.3% of total management expenditures. Quebec, Ontario, Saskatchewan, and British Columbia, combined, represented 82%, 79%, and 77% of total expenditures in each of the three years, respectively.

Forest research and development is undertaken by the federal government and most of the provincial governments. Of the total funds expended on research and development activities, 29%, 27% and 24% were disbursed by provinces in 1981/82, 1982/83, and 1983/84, respectively. The provinces of Québec, Ontario, Alberta, and British Columbia, combined, spent the greater share of the provincial funds expended, averaging about 93% of the total over the three year period (Appendix 2). The Canadian Forestry Service, the federal agency that conducts most of the forest research in Canada, spent directly \$38.4 million, \$44.9 million, and \$57.8 million in each of the years 1981/82 through 1983/84, respectively (Appendix 2). Additional federal expenditures in research

were also made through federal-provincial forest resource development agreements, bringing the total federal contribution to \$39.9 million, \$46.2 million, and \$58.9 million in each of the three years, respectively.

Timber management is basically a provincial responsibility. It includes operations such as cruising, cut inspections, and management planning. Over the three year period, provincial funding averaged approximately 9% of total provincial management expenditures.

Table 8 summarizes forest management expenditures for the period 1977/78 to 1983/84, excluding 1978/79. During the seven year period, total forest management expenditures for the country increased, in current dollars, from \$438.5 million in 1977/78 to \$967.5 million 1983/84, or by 121%. During this same period, provincial expenditures increased by 117% and those of the federal government by 139% (Smyth et al. (1984) and Appendix 2).

The expenditure information obtained from provincial forestry agencies, the Canadian Forestry Service and other federal departments, for the survey period 1982/83 and 1983/84, have been interpreted with care to avoid misleading generalizations. The seven categories to which management expenditures were assigned were chosen to provide a general perspective on the disbursement of funds for forest management, as well as to enable a trend of national and total provincial forest management expenditures to be established over a period of time. Due to differences in record-keeping among provinces, the expenditures assigned to each activity may not represent the total effort in each province or territory. Total figures, however, do represent the total effort, and activity variations are considered to be minor.

## INDUSTRY EXPENDITURES ON FOREST MANAGEMENT

### Introduction

Industrial expenditures on forest management fall into two broad categories. There are the expenditures for the management of private industrial forests and expenses that the industry incurs in the management of publicly owned provincial crown lands. The categories are not separated in this report since in most situations private and public lands are managed together as an integrated timber supply.

Private forest lands in Canada are approximately 8 percent of the total productive forest land area but have been estimated to supply 15 percent of the annual timber harvest. Much of the private forest is in small non-industrial holdings rather than in larger industrial tracts. Private lands are important sources of timber in Nova Scotia, New Brunswick, Prince Edward Island, in the southern parts of Québec, Ontario and British Columbia and in other parts of the country where large blocks of private lands were sold or ceded by the crown for development purposes.

Crown provincial lands play a dominant role in the industry's timber supply at approximately 85 percent and federal lands provide only 1 percent of the timber harvest.

The degree to which the industry participates in forest management on public lands varies considerably across the country. Generally speaking, the nature and extent of this participation is determined by the level to which forest management responsibility is delegated under the various agreements and tenures through which the industry secures its timber supply. In most provinces cutting rights on crown lands have been awarded to the industry under long-term licenses or leases covering extensive areas of land. Under many of these tenures, the licensee is responsible for those management practices which relate to the existing crop such as inventory, working plans, and cutting systems. These are usually subject to the approval of provincial forest authorities.

Under some tenures, the responsibility for reforestation and stand treatment has been retained by the province but usually the tenure agreement assigns responsibility for these treatments to the licensee. In some cases, the crown provides stumpage offsets or rebates to allow for cost recovery. Provincial audits are performed periodically to determine the extent and quality of these treatments. Favourable audits are a prerequisite for license renewal.

In addition to long-term licenses, a portion of the cutting rights on provincial lands are awarded in small parcels for shorter terms. In most cases, licensees under these short-term timber sales have no responsibility for management beyond the harvesting of the present crop in accordance with provincial utilization standards. In British Columbia and Alberta however, some short-term timber sales also require the licensee to be responsible for regeneration.

## Survey of the Forest Industry

Industry's expenditures on forest management are reported under the categories of silviculture, forest protection, forest access and other forestry. The silviculture category is further subdivided into regeneration and stand tending. These categories of activities are described in detail in Appendix 1.

Since 1977 the Canadian Pulp and Paper Association (CPPA) has surveyed its member companies to determine the amount and cost of forest management work undertaken. The purpose was to track the changes in the levels of these efforts and expenditures. In 1977 and 1979 sector-wide estimates were made for CPPA by FLC Reed and Associates Ltd. (Reed, et al. 1978 and Reed, et al. 1980). In addition to the CPPA member company data, the remainder of the industry and provincial and federal expenditures were also included. This same procedure was followed in 1981 for the joint CFS/CPPA surveys and report "Forest Management Expenditures in Canada 1977 - 1981" (Smyth, et al. 1984).

In preparing the estimates of industrial expenditures, a detailed survey of CPPA member companies was conducted. This was combined with estimates of the remaining industry in each province.

Expenditures are reported in three ways; the gross expenditure by industry or an accounting of all dollars spent by companies; the money recovered from governments either as payment for work done or as offsets against stumpage; and the net dollars expended by industry. The latter is the combination of money spent on the management of private industrial lands and on public land but not recovered from government sources.

Reported in this section are the industrial expenditures over the period 1977 to 1983. Analyses and comparisons in the text are made only between 1981 and 1983 data since similar analyses between other reporting years can be found in earlier reports. Summary data for 1977 and 1979 are included in the tables for the readers convenient reference.

## Distribution of Industry Expenditure by Province

Table 9 shows the distribution of forest management expenditures by industry for the years 1977, 1979, 1981 and 1983. Total expenditures for the year surveyed for this report - 1983 - are \$396.7 million of which \$116.4 million were recovered from government through direct payments or as stumpage offsets. This leaves a net industrial expense of \$280.3 million. Gross and net expenditures are lower in current dollar terms than the 1981 level. These lower expenditures are also a departure from the upward real dollar expenditure trend of 1977 through 1981. The money recovered from government, however, have increased in 1983 over 1981.

Current and net industry expenditures are down from 1981 to 1983 in all provinces except Ontario and Alberta. This downward shift is attributable almost entirely to the recession in 1981 and 1982. Its effects carry over on specific forest management activities in 1983.

1977				1979

### Distribution of Industry Expenditures by Activity

Table 10 shows the distribution of industrial expenditures by category of activity for 1977 through 1983. The overall drop in gross and net industrial expenditures is attributed to the effects of the earlier recessionary period. This is most evident in the category of forest access which is most closely associated with harvesting. Gross expenditures on forest access have dropped from \$224.7 million in 1981 to \$170.3 million in 1983. The portion recovered from government decreased from \$61.9 million to \$48.5 million and the net was therefore reduced from \$162.8 million to \$121.8 million. Although timber harvest volumes had returned to a normal level in 1983, a large portion of the road system used that year had been developed earlier.

Forest protection costs vary from year to year depending on the incidence of fire and insect infestations. Industry's expenditures in this category were higher in 1983 than 1981, although government expenditures in this category decreased.

Gross silvicultural expenditures were up from a 1981 level of \$79.8 million to \$99.6 million in 1983 and the portion recovered from government had risen from \$36.8 million to \$63.0 million. The net industrial expenditure decreased from \$43.0 million to \$36.6 million.

The category of other forestry which is mainly administration, planning and support remained relatively unchanged between the two reporting years.

The changes in total dollars expended in these categories between 1981 and 1983 are influenced by conditions which differ from province to province.

### Distribution of Net Industry Expenditures by Province and Activity

Table 11 outlines the net industry expenditures for each province by category and activity.

Net silvicultural expenditures are down in some regions and up in others. The total net is reduced from \$43.0 million in 1981 to \$36.6 million in 1983.

Forest protection costs are higher for industry in 1983 when they were at a level of \$33.7 million compared to an expenditure of \$26.3 million in 1981. The increases were in Quebec, Ontario, Alberta and British Columbia. In New Brunswick and Newfoundland expenses were at a reduced level.

Most of the total reduction in access expenditure from the 1981 level of \$162.8 million to the 1983 expenditure of \$121.8 million is the result of a \$32.6 million decrease in outlays for roads in British Columbia.

Table 10. Distribution of industry expenditures on forest management for 1977, 1979, 1981 and 1983 by activity.

The industry's expenditures in the category of other forestry remain constant over the period, reflecting the economic effects of the recession.

In summary, Table 12 shows the total net industry expenditure by province for the years 1977, 1979, 1981 and 1983. The overall increase in current dollar terms is 27% for the period. Most categories of expenses are sensitive to economic conditions and although harvest volumes in 1983 were at normal levels the impact of the recession is still reflected in a slowdown in the rate of forest management activity increase.

More detailed information for each province may be found in Appendix 3.

## Summary of Public and Industrial Expenditures on Forest Management

Total expenditures on forest management by provincial and federal governments and industry increased in current dollars from \$660 million in 1977 to \$1,248 million in 1983. In real terms (1), however, this represents only a 3.54% increase over the period, or a .55% compound annual rate of increase. The overall trend up to 1981 had been increasing at 4.75%.

The total expenditures estimated from surveys was found to be the same in 1983 as in 1981. In real terms, this is a decrease. The important category of silvicultural expenditures continued to increase in real terms over that period and at rates which would be expected as programs were expanded in response to perceived future timber supply constraints. Other categories, however, have not increased, or have increased at a slower rate.

The primary reason for lower expenditures in 1983 was the recession of 1981-1982. Harvesting was decreased from 155 million m<sup>3</sup> in 1980, to 145 million m<sup>3</sup> in 1981, to 127 million m<sup>3</sup> in 1982, before returning to 157 million m<sup>3</sup> in 1983. The recession had a negative impact on the categories of forest access and other forestry (mainly administrative) and a moderating effect on increases in silviculture and research. Protection costs were also down in 1983. The net effect is a level of forest management expenditure which was unchanged in total between 1981 and 1983 but up in the categories of silviculture and research.

Table 13 shows the distribution of provincial, federal and industrial expenditures within each province for 1977 to 1983, and Table 14 summarizes the distribution of expenditures by management category for provincial, federal and industrial sources. Table 15 presents the expenditures by categories for each province, and Tables 16, 17 and 18 compare the totals from 1977 to 1983 by province, by category and by source. In all tables the calendar, rather than fiscal year is used.

### Total Expenditures

#### Silviculture

Expenditures on silviculture in Canada increased from \$118 million in 1977 to \$336 million in 1983. This is an increase of 184% in current dollar terms, and a real increase of 55% over the period, or a real rate of compound growth of 7.58%. Expenditures in all provinces have risen significantly and are expected to continue to do so at even greater rates in the future as the economy improves and new policies, agreements and expanded silvicultural programs take effect.

### Forest Protection

Annual expenditures on forest protection vary considerably, depending on environmental factors and natural cyclical insect population patterns. In general, there is a long term trend to greater levels of protection of the resource because of the need to conserve the mature forest in order to bridge the timber supply requirements through to the harvest of the new forest. Specifically, there is a decrease in these expenditures in 1983 to \$242 million from \$312 million in 1981.

The overall increase of \$115 million in 1977 to \$242 million in 1983, is a real increase of 15%, which should be considered conservative because of the low level of expenditures in 1983.

### Forest Access

Forest access expenditures decreased over the period 1979, 1981 and 1983. In current dollars the expenditures in 1983 were similar to those of 1977, which means a decrease in real dollar terms. The decrease in 1981 and 1983 can be attributed to the recession of 1981 and 1982, resulting in smaller harvests and some harvesting in areas where primary roads were built earlier.

### Research and Development

Expenditures on forest research and development increased from \$37 million in 1977 to \$77 million in 1983. This is an increase in real terms of 14% over the six year period, and 2.2% per annum. The increase between 1981 and 1983 is an increase of 6.7% in real terms.

### Other Forestry

Expenditures on forest management planning, administration and support increased from \$172 million in 1977 to \$364 million in 1983. This is a real increase of 16% over the period, and 2.5% annually.

### Provincial Expenditures

Total expenditures by provincial governments increased from \$361 million in 1977 to \$784 million in 1983. This is a real increase of 19% over the period, or 2.9% per annum. Within the total there is an increase in silvicultural expenses by the province from \$84 million in 1977 to \$241 million in 1983 or real increases of 57% overall and 7.8% annually. At the same time, other forest management categories were up or down marginally due to business cycles and variable forest protection requirements.

### Federal Expenditures

Federal expenditures on forest management have risen steadily from \$78 million in 1977, to \$184 million dollars in 1983. The real increase is 29% overall, or 4.4% annually. Federal expenditures on silviculture have increased at a greater real rate of 9.4% per year. The new and expanded federal provincial agreements are only beginning to be accounted for in these estimates. The rate of increase is expected to continue into subsequent reporting periods.

### Industry Expenditures

Industry expenditures increased from \$221 million in 1977, to \$280 million in 1983. The 1983 expenditures are approximately \$40 million below the 1981 figures which is totally accounted for in the reduction of expenditures on forest access from \$161 million in 1977, to \$122 million in 1983. This is explained by the recession, a reduction in harvest, and permanent road construction. In most other categories, industry's expenditures remain relatively constant over the two year period.

Over the period 1977 to 1983, industry's expenditures have decreased by 31%. Excluding the access category, the remaining categories increased by 6.3% annually in real terms.
