## TREMBLING ASPEN BIBLIOGRAPHY

by

J. M. Shoup, L. D. Nairn and R. H. M. Pratt

### INTRODUCTION

This is the second in a series of bibliographies to be prepared for the more common tree species in the Manitoba-Saskatchewan Region. The purpose of the bibliographies is to provide ready access to literature relating to various aspects of forestry including the ecology, silviculture, growth, entomology, pathology, and utilization of the tree species. The bibliographies should prove useful to the practicing forester as well as to the research forester.

The bibliography on trembling aspen (Populus tremuloides Michx.) is presented in two sections. The first is a subject listing by the Oxford System of Decimal Classification for Forestry, and the second an alphabetical listing. In addition, a synopsis of subject matter headings and their corresponding numerical assignment based upon the O.D.C. system for forestry is presented. The prime source for literature cited herein has been from Forestry Abstracts (published by Commonwealth Agricultural Bureaux, Farnham Royal, England). Additional material has been outlined from publications received by the Forestry Branch, Department of Forestry and Rural Development library in Winnipeg, Manitoba. The classification of all literature has been reviewed by the authors and, where necessary, reclassified into one or more subject categories. The bibliography is considered complete up to and including 1966 publications, however, many 1967 publications have been included.

At the time that this bibliography was in its final stages of preparation, the authors became aware of a somewhat similar publication on poplar by R. E. Farmer and J. S. McKnight<sup>1</sup>. This bibliography is

highly recommended for those requiring a complete literature review of the genus Populus. The most complete study of trembling aspen in any one publication is found in the book by Graham et al<sup>1</sup>.

Revised bibliographies will be prepared frequently to ensure their usefulness. No doubt all past publications on trembling aspen are not included in this bibliography and the authors would appreciate hearing of any omissions so that they may be included in the first revision.
