FORESTRY BRANCH

LIST OF SPECIES DEPOSITED IN
THE MYCOLOGICAL HERBARIUM OF THE
FOREST RESEARCH LABORATORY,
WINNIPEG, MANITOBA

B.C. Sutton and D.P. Brambilla

Introduction

Responsibility for the maintenance of a reference collection of forest diseases and associated fungi in the Manitoba-Saskatchewan Region was initiated at the Forest Pathology Laboratory, Department of Forestry and Rural Development, Saskatoon, Saskatchewan (herbarium designation SAFB) in 1958. Following departmental reorganization and the transfer of the pathology section to Winnipeg, approximately 2000 mycological specimens were moved from Saskatoon to the Forest Research Laboratory, Winnipeg, Manitoba (herbarium designation WLNK) in 1964 to form the nucleus of a mycological reference collection. The herbarium has been amplified with material collected in Manitoba and Saskatchewan by personnel of the Forest Insect and Disease Survey, and also by the acquisition of duplicate material from the Forest Research Laboratory, Calgary, Alberta (CFB), the Forest Pathology Laboratory, Maple, Ontario (MFB), the Forest Research Laboratory, Victoria, British Columbia (DAVFP) and the Commonwealth Mycological Institute, Kew, England (IMI). So far 8800 accessions have been made representing 1428 species belonging to 560 genera.

The herbarium is arranged in two sections - a box collection for bulky specimens, and a folder collection for small specimens. Both sections are divided according to the following major taxonomic groups - Deuteromycotina, Ascomycotina, Basidiomycotina (excluding Uredinales and Ustilaginales which are kept separately), Myxomycota, Mastigomycotina, Zygomycotina, Arceuthobium and non-infectious disorders. Within each group, specimens are filed or arranged alphabetically according to genus, within each genus alphabetically according to species and within species alphabetically according to host.

This list is arranged into three indices. The generic index is arranged in alphabetical order and shows the major taxonomic group to which the fungus belongs. The species index contains the names and authorities of fungi in alphabetical order. Fungi not represented in the Manitoba-Saskatchewan Region are designated by an asterisk. The duplicate index shows the material from the Manitoba-Saskatchewan Region which is available for exchange or donation.

Many of the taxonomic determinations have been made on the basis of description alone without any named or authenticated material for direct comparison. Therefore it is acknowledged that some of the names appearing in these lists are tentative, consequently determinations must be accepted with some degree of reservation.

GENERIC LIST

Acanthostigma deNot.	Ascomycotina
Acladium Link	Deuteromycotina
Acrodictys M.B. Ellis	Deuteromycotina
Acrospeira Mont.	Deuteromycotina
Actidium Fr.	Ascomycotina
Adelopus Theiss.	Ascomycotina
Agaricus L. ex Fr.	Basidiomycotina
Aleuria Fckl	Ascomycotina
Aleurodiscus Rabenh. ex Cke	Basidiomycotina
Allescheriella P. Henn.	Deuteromycotina
Alternaria Nees ex Wallr.	Deuteromycotina
Amphisphaerella (Sacc.) Kirschst.	Ascomycotina
Amphisphaeria Ces. & deNot.	Ascomycotina
Anthostoma Nits.	Ascomycotina
