FOREWORD

The tables in this publication contain forest fire statistics for the calendar year 1977 as reported by all Canadian forest fire control agencies. We have asked the agencies to report all fires that occurred within their respective jurisdictions. The statistics include:

Forest Fire Occurrence

1. The number of fires and area burned by nine cause classes: recreation, settlement, woods operations, railways, other industries, incendiary, miscellaneous known, lightning and unknown.
2. For each month, the number of fires reported and their final acreage.

Forest Fire Control Expenditure

1. The total annual budgeted costs (i.e., expenditures that are planned and budgeted at the beginning of the fiscal year and spent regardless of the severity of the fire season).
2. The total actual fire fighting costs (i.e., expenditures, over and above total annual budgeted costs, that arise from fire suppression activities).

Forest Fire Effects

1. The number of fatalities due directly to fire or while in the act of controlling a fire.
2. The distribution of fires and area burned by five fire size classes.
3. The monetary losses due to fire:
 - a) For ^{timber loss} ~~wood fibre~~ damage, the area burned and estimated value lost ^{in three categories:} ~~of three forest~~ types: merchantable timber, regeneration and immature, and other types (cutover, unproductive, etc.)
 - b) For property damage, the estimated value lost of improvements, structures, personal property, industrial plant and other equipment, felled wood in process, and any other property damaged or destroyed by fire.

The following symbols are used in the tables:

- nil or zero
- too small to be expressed
- .. not available
- ... not applicable
- e estimate

all units are quoted in metric units.

✓ We have adopted a new format in order to expedite the publication of the statistics and to present them more clearly and concisely. Furthermore, we now publish all figures in metric units.

We show total statistics for Canada as a whole. Because protection intensity for most of the Yukon and Northwest Territories is less than for most lands within provincial boundaries, we show separate totals for the Provinces and for the Territories.

Forest fire control agencies across Canada have different administrative structures and, therefore, consistent reporting of expenditures from agency to agency is very difficult. The expenditure statistics that we publish should not be compared between agencies without taking account of administrative differences. Publication of these figures is intended only to show the order of magnitude of forest fire control expenditure in Canada. Similarly, value lost measures vary between agencies and in most cases do not take into account recreation, wildlife, watershed and other important considerations. Publication of these figures is intended only to show the order of magnitude of some of the monetary effects of forest fires.

PNFI Contained within the following tables are all of the data that we have collected for 1977. Anyone requiring more detailed statistics can follow one of two courses: a) contact the ~~Forest Fire Research Institute~~ for assistance in making requests, or b) submit requests directly to the appropriate agencies.
