ABSTRACT

This report is a compilation of names and authors used for 243 fungi at the Great Lakes Forestry Centre. Common names and hosts and a list of the more common synonyms are included.

RÉSUMÉ

Ce rapport consiste en un répertoire des noms et des auteurs de la description de 243 fungi; ces noms sont employés au Centre forestier des Grands Lacs. Les noms vernaculaires, les noms des hôtes et les synonymes les plus courants sont aussi indiqués.

FOREWORD

This list has been prepared to serve as a guide to names and authors of those fungi commonly encountered by the Field Technicians of the Forest Insect and Disease Survey Unit at the Great Lakes Forestry Centre. Pathologists and others who have to deal with fungal nomenclature should also find this guide useful. Many recent changes in the names of fungi, as well as changes to the International Code of Botanical Nomenclature made at the XIII International Botanical Congress, are reflected in this list. Perhaps most noteworthy is the use of : in place of ex with names sanctioned by Fries (:Fr.) or Person (:Pers.).

The common names used are based on those presented in *Names of Plant Diseases in Canada* (Anon. 1975. Agriculture Quebec, Publ. QA38-R4-1, 2nd ed.), but some have been modified by the addition of a host or fungal genus. Hosts listed are those recognized in Ontario and the common names are those used in *Native Trees of Canada* (R.C. Hosie, 1979 Fitzhenry & Whiteside Ltd. in coop. with Can. For. Serv., 8th ed.). Teleomorphs (the perfect or sexual state) have been included where known and should be used in reports in preference to the name given to the anamorph (the imperfect or asexual state). The author abbreviations are those presented in *Recommended Abbreviations for the Names of Some Commonly Cited Authors of Fungi* (D.L. Hawksworth, 1980. Rev. Pl. Path. 59(II):473-480). Three indices, one using the recommended name first and accompanied by the more common synonyms, a second listing the synonyms first and accompanied by the recommended name, and a third listing common names and accompanied by the recommended Latin binomial are included. The synonyms are those in common use; many older synonyms have been omitted. Those fungi found in the tables of synonymy are indicated by an asterisk. Two lined, blank pages have been provided so that additional fungi or corrections can be listed.

We recognize that not all mycologists or pathologists will agree with our choice of names and we welcome any suggestions or corrections you wish to make. If you believe that we are in error, we would appreciate it if you would provide a reference as well as what you think the correct name should be. Also, if you think that some fungi should be added to future additions, we would welcome your suggestions. A second edition of this list will be produced in two or three years so all comments will be useful.

The authors would like to express their appreciation to the laboratory staff of the Mycology Section of the Forest Insect and Disease Survey Unit who assisted with this project in so many ways. Special thanks go to Dr. J. Ginns of the Biosystematics Research Institute in Ottawa for answering our many questions and for reviewing many of these names and authors.
