ABSTRACT

A total of 119 public sector, private and forest industry forest tree production centres produced planting stock for reforestation purposes in 1984. The majority of these seedlings were destined for forest renewal projects on provincial crown lands. Of the 119 production centres, 43 reared bare-root stock and 101 reared containerized seedlings. The total stock available for planting was 206 and 252 million bare-root and containerized seedlings, respectively.

During the period 1979-1984, the number of bare-root seedlings shipped annually for planting remained fairly constant. In 1979, the number of seedlings shipped was 205 million, in 1980 it was 228 million, in 1982 it was 211 million, and in 1984 it was 206 million. Production of containerized stock, on the other hand, increased substantially during the same period. Approximately 252 million trees were available for shipping in 1984 in comparison with 108 million in 1979. Production in 1986 is expected to double that of 1984.

Of the total seedlings available for planting in 1979, 65% were bare-root stock; by 1984 the figure had declined to 45%.

RÉSUMÉ

En 1984, 119 centres gouvernementaux, privés et industriels produisaient du matériel de reboisement. La plus grande partie des semis étaient destinés à des projets de renouvellement forestier sur des terres provinciales. Parmi les 119 centres producteurs, 43 produisaient du matériel à racines nues et 101 des semis en contenants. Le stock total de matériel de plantation était respectivement de 206 et de 252 millions de semis à racines nues et en contenants.

De 1979 à 1984, le nombre de semis à racines nues expédiés annuellement à des fins de plantation est demeuré assez constant: il était de 205 millions en 1979, de 228 millions en 1980, de 211 millions en 1982 et de 206 millions en 1984. Par contre, la production de matériel en contenants a augmenté considérablement au cours de la même période. Les stocks livrables étaient d'environ 252 millions d'arbres en 1984, comparativement à 108 millions en 1979. On s'attend à ce que la production de 1986 soit le double de celle de 1984.

La proportion totale de semis transplantables à racines nues en 1979 était de 65% et avait baissé à 45% en 1984.

ACKNOWLEDGMENTS

This directory of Canada's forest tree production centres was prepared with the assistance of representatives of provincial forestry agencies, the forest industry, and private sector growers across Canada. Their cooperation is greatly appreciated. Special thanks are also due to the Canadian Forestry Service regional FORSTATS representatives who initiated contact with production centre managers and provided data for their respective regions.

FOREWORD

The FORSTATS (FORestry STATisticS) Program provides current statistical information on Canada's forest resources, including periodic descriptions and analyses of forest inventory and growth; losses from insects, diseases, and fire; nursery production and silvicultural practice; and social and economic conditions.

The following federal government establishments participate in the FORSTATS Program: Canadian Forestry Service Headquarters in Hull, Que., the Pacific Forestry Centre in Victoria, B.C., the Northern Forestry Centre in Edmonton, Alta., the Great Lakes Forestry Centre in Sault Ste. Marie, Ont., the Laurentian Forestry Centre in Ste-Foy, Que., CFS Maritimes in Fredericton, N.B., the Newfoundland Forestry Centre in St. John's, Nfld., the Petawawa National Forestry Institute in Chalk River, Ont., and the Forest Pest Management Institute in Sault Ste. Marie, Ont. Provincial forestry agencies, other provincial and federal agencies, and the forest industry cooperate in providing data for the program.

INTRODUCTION

This report is the third in a series of reports providing information on forest tree production centres operating throughout Canada. It is intended primarily for use by nursery managers and other individuals who have a direct or indirect interest in forest tree production centres, their location, and production levels.

The purpose of this report is to provide a current (1984) listing of provincial, industrial, and private commercial production centres producing, or scheduled to produce over the next year or two, bare-root and containerized forest tree seedlings primarily for reforestation of harvested land. For individual centres the report provides an estimate of the number of trees shipped for bare-root stock and the number of shippable trees for container stock for 1983 and 1984, respectively. In addition, an estimate of the planned production levels for 1985 through 1988 is given for centres that provided such information during the survey.

NATIONAL SUMMARY

Bare-root Seedling Production

In 1984, approximately 206 million bare-root seedlings were shipped from 43 nurseries across Canada (Table 1). Seventy-eight percent of the total number were from nurseries located in British Columbia, Ontario and Quebec. The majority of the growing stock was destined for reforestation and afforestation projects on provincial crown lands, with the remainder being planted on federal,

Table 1. National summary of bare-root seedling production.

| Newfoundland | 1 | 1 | 40 | 40 | 3,242 | 7,000 | 9,000 |
| Total | 43 | 42 | 2,575 | 1,686 | 206,071 | 246,202 | 245,184 |

industrial freehold, private, and municipal lands. The number of seedlings shipped annually remained relatively constant over the period 1979-1984. In 1979, the total number of seedlings shipped from nurseries was 205 million; in 1980, 228 million; in 1982, 211 million; and in 1984, 206 million.

During the period 1979-1984, the total number of bare-root nurseries reporting declined from 46 in 1979 to 43 in 1984. The provinces of Saskatchewan, Ontario, Quebec, New Brunswick and Newfoundland experienced reductions in the number of operational facilities, while in British Columbia the number of nurseries increased from 8 to 11.

The number of hectares of land under cultivation for the production of bare-root stock increased marginally (1%) in the period 1979-1984, from 1,517 ha in 1979 to 1,686 ha in 1984. The estimated production of stock in this cultivated area, and any planned additions, were forecasted at approximately 246 million seedlings for 1985 and 245 million for 1986. Production targets for each of these two years are down sharply from the production target of 285 million forecasted for 1984¹.

Nationally, the most significant reductions in planned production of bare-root seedlings during the period 1984-1986 are in British Columbia, Manitoba, Ontario, and New Brunswick. Newfoundland reported a significant increase in production levels for 1985 and 1986 over 1984.

Containerized Seedling Production

In 1984, approximately 252 million containerized seedlings were available for shipping from 101 production centres located throughout Canada (Table 2). Eighty-six percent of the total number of shippable trees produced were grown in production centres located in four provinces--Ontario (32%), British Columbia (30%), New Brunswick (16%), and Quebec (8%). The total number of shippable trees produced in 1984 was up significantly over 1979 by almost 133%.

The total estimated production target reported was 384 million from 111 container centres in 1985, and 555 million from 116 centres in 1986. These annual targets represent a significant increase over the estimated 1984 production¹ target of 271 million seedlings. All provinces except Alberta and Newfoundland will contribute to this increase in growth.

There were approximately 567,719 m² of growing space available for containerized production in 1984. The total production area includes heated and unheated greenhouses, hoop houses, and shelterhouses. This production area represents an increase of 303,653 m², or 115%, over that available in 1983, and 463,376 m², or 444%, over that reported in 1979.

^{a,b} Total provincial estimates for 1985 and 1986, respectively, provided by the Ontario Ministry of Natural Resources and the Quebec Ministry of Energy and Resources, respectively.

^c Includes eight 1-year contracts that produced a total of 4.1 million seedlings.

The type of container used by growers varies considerably across the country. In British Columbia, the most popular container and the one used almost exclusively is the BC/CFS styroblock. The Spencer-Lemaire Rootrainer is used, but production based on its use is not significant.

In Alberta, Spencer-Lemaire Roottrainers are the most popular containers employed, although the BC/CFS styroblock is used by some private growers. In Saskatchewan, the Can-Am Multipot #2 is used exclusively at the province's only container centre. At Manitoba's two provincial container centres, the Japanese paperpot FH408 is used almost exclusively; however, over the past several years, Can-Am Multipots (#1, #2 and #5) have been introduced into the greenhouses on an experimental basis.

In Ontario, several types of containers are in use at present. The Japanese paperpot is the most popular and most widely used in both provincial and private production centres, followed by the Spencer-Lemaire Ferdinand container. The Japanese paperpot FH308 and Can-Am Multipot containers are also used, but to a limited extent.

In Quebec, various containers are used, including the Quebec tube, IPL container, Can-Am Multipot, BC/CFS styroblock, and Japanese paperpot FH408.

In Atlantic Canada, the type of container used varies from province to province. Since the last report in 1984, private growers in New Brunswick have introduced several new containers, specifically the IPL 45 and 110, and the Jiffy-pot. The Japanese paperpot FH408 remains the most widely used container, although the Can-Am Multipot and BC/CFS styroblock are used extensively in a number of production centres. In Nova Scotia the Can-Am Multipot is used almost exclusively by both provincial and private growers, although the IPL 45 has been introduced into one forest company's rearing program. In Prince Edward Island and Newfoundland, the Can-Am Multipot is used exclusively at all greenhouses.

SEEDLING PRODUCTION BY OWNERSHIP

Table 3 summarizes, by ownership and province, the numbers of bare-root and containerized seedlings shipped for 1984; Table 4 summarizes, by ownership and province, estimated bare-root and containerized seedling production for 1986. In 1984, provincially managed tree nurseries in Canada shipped almost 92% of the total bare-root stock production. On the other hand, private nurseries accounted for 47% of the total amount of container stock shipped. The total

Table 3. National summary of seedling production by ownership, 1984.

| | Container | --- | 100.0 | --- | --- | 1,214 |
| Newfoundland | Bare-root | --- | 100.0 | --- | --- | 3,242 |
| | Container | --- | 100.0 | --- | --- | 2,439 |
| Total Canada | Bare-root | --- | 91.5 | 6.4 | 2.1 | 206,071 |
| | Container | --- | 43.1 | 10.2 | 46.7 | 252,049 |

number of trees shipped from private growers varied, however, across the country. In Ontario, over 86% of all container stock shipped came from private growers; Quebec followed at 52%, British Columbia at 41%, and Nova Scotia at 37%. Provincial greenhouses in the provinces of Manitoba, Prince Edward Island, and Newfoundland met the total provincial requirements for container seedlings. There was no production of container stock seedlings in Saskatchewan in 1984.

| New Brunswick | Bare-root | — | 26.9 | 73.1 | — | 13,000 |
| | Container | — | 61.2 | 38.3 | .5 | 54,411 |
| Nova Scotia | Bare-root | — | 100.0 | — | — | 6,500 |
| | Container | — | 64.4 | 19.1 | 16.5 | 29,754 |
| Prince Edward Island | Bare-root | — | 100.0 | — | — | 400 |
| | Container | — | 100.0 | — | — | 2,000 |
| Newfoundland | Bare-root | — | 100.0 | — | — | 9,000 |
| | Container | — | 100.0 | — | — | 3,165 |
| Total Canada | Bare-root | — | 88.1 | 6.4 | 5.5 | 245,184 |
| | Container | — | 46.6 | 8.6 | 44.8 | 554,554 |

Of Canada's total estimated production of tree seedlings for 1986, 88% of bare-root stock and almost 47% of containerized stock will be grown in provincial government facilities. The percentages, however, vary from province to province. All bare-root stock, or the greater percentage of it, will be grown by provincial nurseries in all provinces except New Brunswick, where only 27% will be a direct provincial responsibility.

As for containerized seedlings, the provinces of Saskatchewan, Manitoba, Prince Edward Island, and Newfoundland will produce their entire stock in provincial facilities. In British Columbia, Ontario, Quebec, New Brunswick and Nova Scotia, a significant proportion of total estimated stock will be grown by the forest industry or the private sector.

BARE-ROOT AND CONTAINERIZED SEEDLING TRENDS: 1979-1984

In 1980 when the first report² on tree seedling production centres in Canada was published, the data showed that, for 1979, the total estimated number of bare-root seedlings shipped and of shippable containerized seedlings was 313.3 million. This was in the ratio of 65% bare-root to 35% containerized stock. In the following five-year period, not only did the total number of seedlings increase, but the ratio of bare-root to containerized stock had reversed itself. By 1984, the ratio had changed to 55% containerized and 45% bare-root stock. Figure 1 shows the trend in bare-root and containerized seedlings shipped for the period 1979-1984.

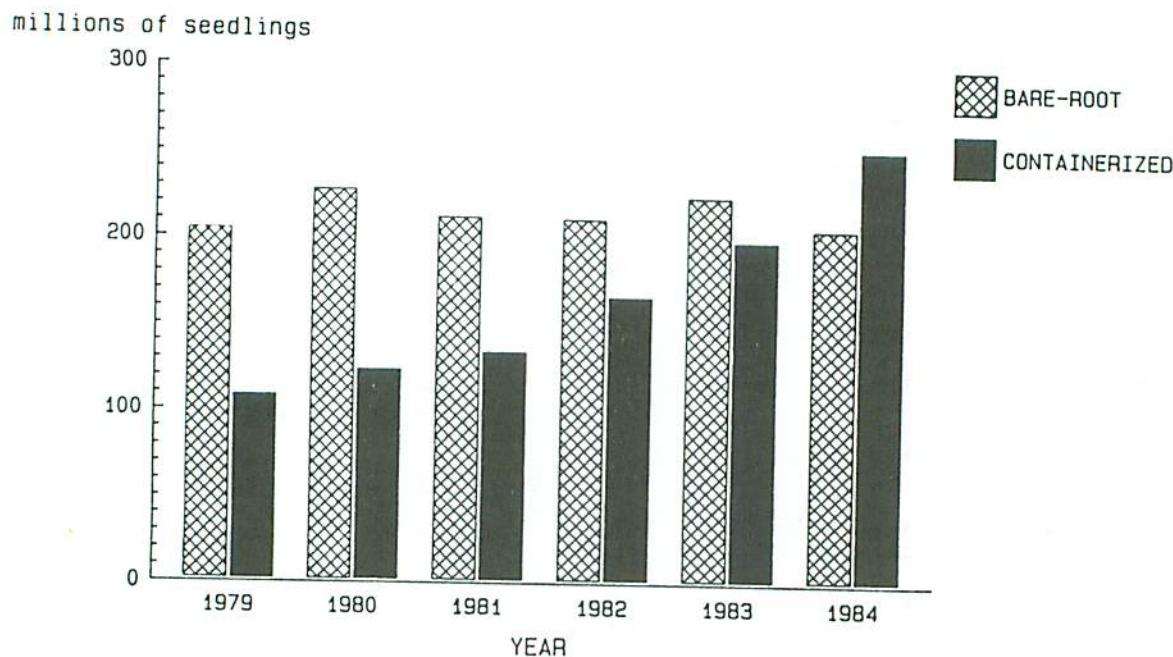

Figure 1. Total number of forest tree seedlings shipped in Canada, 1979-1984.

During the period, the most dramatic reductions in bare-root stock occurred in British Columbia (20%), Saskatchewan (34%), and New Brunswick (30%), while a minor reduction took place in Ontario (4%). The provinces of Alberta, Manitoba, Quebec, and Nova Scotia increased their output during this period.

All provinces except Alberta and Saskatchewan increased the number of containerized seedlings shipped during the period, some more dramatically than others. Quebec's output increased by 2,685%, Ontario's by 695%, British Columbia's by 118%, and New Brunswick's by 23%.

² Smyth, J.H. 1980. A directory of forest tree nurseries in Canada. Dep. Environ., Can. For. Serv., Sault Ste. Marie, Ont. Report O-X-305. 51 p. + Appendix

Estimated production targets for the two years 1985 and 1986 indicate that containerized seedling production will exceed bare-root production by a wide margin. Estimates show that the containerized share of total seedling production will be 61% and 69% in 1985 and 1986, respectively.

DIRECTORY

Explanation of Directory Information

(a) Bare-root production centres

| | |
|--------------------------------|--|
| Area available for production: | The area within the nursery available for growing bare-root stock. |
| Area currently in production: | The area within the nursery currently growing bare-root stock. |
| Productive capacity: | The quantity of bare-root stock that could be grown if the total area available for production were utilized. |
| Trees shipped: | The total number of trees shipped from a bare-root nursery for each of the calendar years noted. |
| Planned production: | The estimated production targets for the nursery in future years. For this report, future years include 1985-1988. |

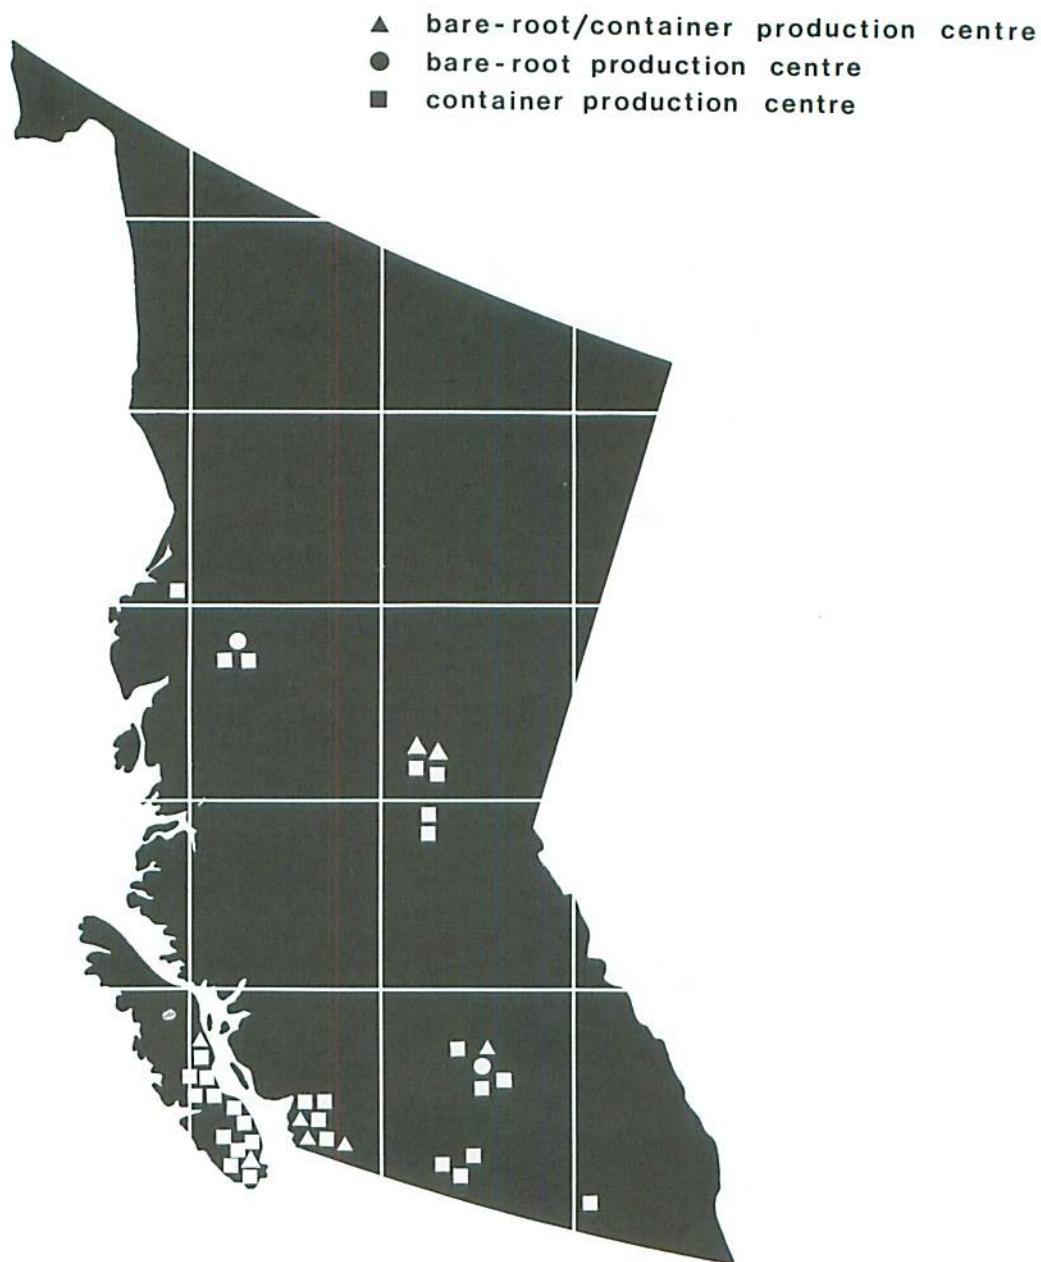

(b) Containerized production centres

| | |
|--------------------------------|---|
| Area available for production: | Includes heated and unheated greenhouses, shelterhouses, hoophouses, etc., but does not include shade areas and open holding areas. |
| Shippable trees: | Refers to the number of trees available for shipping for each of the calendar years shown. |
| Planned production: | The estimated production targets for the production centre in future years. For this report, future years include 1985-1988. |

(c) Major species grown

Appendix 1 provides the common and scientific names for species grown at production centres.

APPENDIX 1

MAJOR TREE SPECIES REARED IN CANADA'S FOREST TREE NURSERIES

| Common name | Botanical name | Symbol |
|--------------------------|---|--------|
| CONIFEROUS SPECIES | | CON |
| Pine | <i>Pinus</i> L. | P |
| Eastern white pine | <i>Pinus strobus</i> L. | EWP |
| Red pine | <i>Pinus resinosa</i> Ait. | RP |
| Jack pine | <i>Pinus banksiana</i> Lamb. | JP |
| Lodgepole pine | <i>Pinus contorta</i> Dougl. | LP |
| Scots pine | <i>Pinus sylvestris</i> L. | SP |
| Larch | <i>Larix</i> Mill. | L |
| Western larch | <i>Larix occidentalis</i> Nutt. | WL |
| European larch | <i>Larix decidua</i> Mill. | EL |
| Spruce | <i>Picea</i> A. Dietr. | S |
| White spruce | <i>Picea glauca</i> (Moench) Voss | WS |
| Engelmann spruce | <i>Picea engelmannii</i> Parry | ES |
| Red spruce | <i>Picea rubens</i> Sarg. | RS |
| Black spruce | <i>Picea mariana</i> (Mill.) B.S.P. | BS |
| Norway spruce | <i>Picea abies</i> (L.) Karst. | NS |
| Hemlock | <i>Tsuga</i> (Endl.) Carr. | H |
| Western hemlock | <i>Tsuga heterophylla</i> (Raf.) Sarg. | WH |
| Douglas-fir | <i>Pseudotsuga menziesii</i> (Mirb.) Franco | DF |
| Fir | <i>Abies</i> Mill. | F |
| Balsam fir | <i>Abies balsamea</i> (L.) Mill. | BF |
| Amabilis fir | <i>Abies amabilis</i> (Dougl.) Forbes | AF |
| Arbor-vitae | <i>Thuja</i> L. | C |
| Eastern white cedar | <i>Thuja occidentalis</i> L. | EWC |
| Western red cedar | <i>Thuja plicata</i> Donn | WRC |
| OTHER CONIFEROUS SPECIES | | OCON |
| DECIDUOUS SPECIES | | DEC |
| Poplar | <i>Populus</i> L. | PO |
| Black walnut | <i>Juglans nigra</i> L. | WA |
| OTHER DECIDUOUS SPECIES | | ODEC |
| MISCELLANEOUS SPECIES | | X |
